# Training on Integrated Progress Report
# **Energy Efficiency – Annex IV & XVII**

***Ph.D. Stephane Quefelec***
***European Environment Agency***

**8 October 2025 Sarajevo**

European Environment Agency

# Agenda

<u>What to report on energy efficiency</u>:

- Thematic aspects: Annex IV – EEA
- Thematic aspects: Annex XVII – EEA

• Real life experience: insight from Spain

<u>How to report</u>:

• Reportnet 3 – EEA – General intro

• Exercise - EEA →

*Logging in & set-up*
*Data input – overview*
*Data input – excel import*
*Data input – excel export*
*Quality assurance – validations*
*Release of data - submission*

# Objective and expected result

=> At the end of the session, you will know **WHAT** to report and **HOW** to use the templates and the Reportnet 3 platform to report the data on Annex IV and XVII.

# Welcome

Your speakers for this meeting:

- Stéphane QUEFELEC – EEA – Climate Neutrality, Energy and Mobility (EEA/CMT 1)
- Sofía Rodríguez Pita – Spain – Lead Reporter – Annex IV and XVII

# National Energy and Climate Progress Reporting

*Context*

European Environment Agency

# **The Adapted Governance Regulation:** planning & reporting

*National Energy and Climate Plans*
***(NECP)***

Adapted Governance Regulation 2018/1999: Article 3, 9, 14, 17

# **Energy Communities NECPR**: EEA dataflow overview

Reportnet

**<u>Dataflow</u>** = *a **survey within the reporting platform** containing information from particular reporting obligation(s) **which can be submitted independently** from other obligations*.

[Reportnet 3]()

# Dataflows in Reportnet 3: what are we focusing on today?

## List of dataflows in Reportnet 3:

- NECPR – Progress to targets (GHG)
- NECPR – Progress to targets (RES)
- NECPR – Progress to targets (EE)
- NECPR – Adaptation (Article 17)
- NECPR – Additional reporting (RES)
- NECPR – Additional reporting (EE)
- Integrated National Policies and Measures (PaMs)
- National systems for reporting on PaMs and projections
- National GHG projections
- Adaptation planning and strategies (Article 19)
- European Climate Law Recommendations (*)

* This dataflow is aligned with NECPR but is voluntarily provided under the European Climate Law 2021/1119

# Overview of prefilled / post-filled data in this dataflow

# Annex IV

*Thematic guidance*

# PROGRESS TO TARGET - Energy Efficiency

| Article 21 (a) – Progress towards objectives, targets, and contributions within energy efficiency | |
|---|---|
| By 15 March 2025 and every second year thereafter, CPs shall report to the Energy Community Secretariat their implementation of the following trajectories and objectives within energy efficiency:<br>(1) National contribution for PEC and FEC;<br>(2) the indicative trajectory PEC and FEC;<br>(3) the indicative milestones and progress indicators of the long-term strategy for the renovation of the national stock of residential and non-residential buildings;<br>(4) where applicable, an update of other national objectives set out in the national plan. | |
| <u>Reports due:</u> | 15 March – Biannually – To start in 2025 |

# PROGRESS TO TARGET - energy efficiency – Tables

- Table 1: National contribution and indicative trajectory for primary and final energy consumption,
- Table 2: Milestones and progress indicators of the long-term strategy for the renovation (LTRS) of the national stock of residential and non-residential buildings – building stock ,
- Table 2_Other: Other milestones and progress indicators of the long-term strategy for the renovation (LTRS) of the national stock of residential and non-residential buildings – building stock,
- Table 3: Milestones and progress indicators of the long-term strategy for the renovation of the national stock of residential and non-residential buildings – renovation rates,
- Table 4: Milestones and progress indicators of the long-term strategy for the renovation of the national stock of residential and non-residential buildings – other indicators,
- Table 5: Milestones and progress indicators of the long-term strategy for the renovation of the national stock of residential and non-residential buildings - the contributions to the Union's energy efficiency targets,
- Table 6: Update of other national objectives on energy efficiency as reported in the integrated national energy and climate plan.

**The process for pre-filling:**
Progress towards indicative trajectory 2021-2030 in PEC and FEC.

| Table | Type of filling | Source(s) of data |
|---|---|---|
| Annex 4, table 1, fields 6 and 7 | Pre-filling | Eurostat energy balances |

# Annex 4 – Table 1

## National contribution and indicative trajectory for primary and final energy consumption

| Reporting element | Specification | Unit | Indicator | | Data format |
|---|---|---|---|---|---|
| Definition of the 2030 savings contribution [1] | M | n/a | 1 | | Data format: drop-down menu |
| Description of the 2030 contribution and indicative trajectory from 2021-2030 (2025) | M | n/a | 2 | | Data format: text |
| Value of the savings contribution 2029 (2030) | M | 3 | | | Data format: text for unit, number (decimal) for indicator |
| Translation into absolute level of PEC | M | ktoe | 4 | | |
| Translation into absolute level of FEC | M | ktoe | 5 | | Data format: number (decimal) |
| | | | X-3[4] | X-2 | |
| Progress towards indicative trajectory 2021-2030 in PEC (2) | M | ktoe | 6 | | |
| Progress towards indicative trajectory 2021-2030 in FEC (2) | M | ktoe | 7 | | These fields will be pre-filled based on Eurostat energy balance data when available. |
| Baseline GDP level, if the contribution is set as an intensity target (2016) | $M_{ap}$ Mandatory if applicable | Million-euro, chain-linked volumes [3] | 8 | | Data format: number (decimal) |
| General comments on the national contribution and indicative trajectory for primary and final energy consumption[5] | V Voluntary | 9 | | | Data format: number (decimal) |

**FIELD 1:**The purpose of this field is to report their definition of the 2030 savings contribution in accordance with their NECP through the selection of a specific option (i.e., primary energy consumption; final energy consumption; primary energy savings; final energy savings; energy intensity.)

**FIELD 2:** The purpose of this field is to describe the 2030 contribution and indicative trajectory from 2025-2030;

**FIELD 3:** The purpose of this field is to document the value of the **savings contribution** in 2030 in accordance with their NECP.

# Annex 4 – Table 1

## National contribution and indicative trajectory for primary and final energy consumption

| Reporting element | Specification | Unit | Indicator | | |
|---|---|---|---|---|---|
| Definition of the 2030 savings contribution [1] | M | n/a | 1 | | Data format: drop-down menu |
| Description of the 2030 contribution and indicative trajectory from 2021-2030 (2025) | M | n/a | 2 | | Data format: text |
| Value of the savings contribution 2029 | M | 3 | | | Data format: text for unit, number (decimal) for indicator |
| Translation into absolute level of PEC | M | ktoe | 4 | | |
| Translation into absolute level of FEC | M | ktoe | 5 | | Data format: number (decimal) |
| | | | X-3[4] | X-2 | |
| Progress towards indicative trajectory 2021-2030 in PEC (2) | M | ktoe | 6 | | These fields will be pre-filled based on Eurostat energy balance data when available. |
| Progress towards indicative trajectory 2021-2030 in FEC (2) | M | ktoe | 7 | | |
| Baseline GDP level, if the contribution is set as an intensity target | $M_{iap}$ Mandatory if applicable | Million-euro, chain-linked volumes [3] | 8 | | Data format: number (decimal) |
| General comments on the national contribution and indicative trajectory for primary and final energy consumption[5] | V Voluntary | 9 | | | Data format: number (decimal) |

MB1

**FIELD 4-5**: The purpose of this field is to translate the value of the savings contribution 2030 (field 3) into absolute level of PEC (Primary Energy Consumption) or FEC (Final Energy Consumption).
**FIELD 8**: The purpose of this field is to report the Baseline GDP level, if the contribution is set as an intensity target.
**FIELD 9**: The purpose of this field is to provide additional explanation on the national contribution and indicative trajectory for primary and final energy consumption, including their underlying methodology.

# Annex 4 – Table 1 – Field 3 good examples

**National contribution and indicative trajectory for primary and final energy consumption**

The savings contribution in 2030 can for example be calculated as follows:

- **In case it is first defined in terms of maximum level of primary energy consumption**, then the value of the savings contribution corresponds to primary energy savings and can be calculated as the difference in the primary annual energy consumption in 2030 between a reference scenario and the target scenario (i.e. the absolute level of primary energy consumption indicated in field 4)
- **In case it is first defined in terms of maximum level of final energy consumption**, then the value of the savings contribution corresponds to final energy savings and can be calculated as the difference in the final annual energy consumption in 2030 between a reference scenario and the target scenario (i.e. the absolute level of final energy consumption indicated in field 5)
- **In case it is first defined in terms of primary energy savings**, then the value of the savings contribution corresponds to primary energy savings and is directly the target adopted by the CPs;
- **In case it is first defined in terms of final energy savings**, then the value of the savings contribution corresponds to final energy savings and is directly the target adopted by the CPs;
- **In case it is first defined in terms of primary or final energy intensity**, then the value of the savings contribution corresponds to either primary or final energy savings. The target in energy intensity needs to be translated in absolute level of energy consumption (as indicated in field 4 for primary energy consumption, or field 5 for final energy consumption). Then the savings contribution can be calculated as the difference in annual energy consumption in 2030 between a reference scenario and the target scenario (i.e. the absolute level of primary or final energy consumption indicated in field 4 or field 5.

# Annex 4 – Table 2

**Milestones and progress indicators of the long-term strategy (LTRS) for the renovation of the national stock of residential and non-residential buildings – building stock**

| | Number of buildings[1] | | | Total floor area (m2)[2] | | | Primary energy use of buildings (TJ)[3] | | | Final energy use of buildings (TJ)[3] | | | Direct GHG emissions in buildings ($tCO_{2e}$) | | | Total GHG emissions in buildings ($tCO_{2e}$) | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 |

| Residential buildings | Data format: number (integer and decimall) | | | | | | | | | | | | | | | | | |
| Of which worst performing buildings[5] | | 1 | | | 2 | | | 3 | | | 4 | | | 5 | | | 6 | |
| Non-Residential buildings | | | | | | | | | | | | | | | | | | |
| Of which worst performing buildings | | | | | | | | | | | | | | | | | | |
| Public buildings[6] | | | | | | | | | | | | | | | | | | |
| Of which worst performing buildings | | | | | | | | | | | | | | | | | | |

Mandatory if available, 3 historical years. The years are identified as 2020, X-3 and X-2, where X is the reporting year.

The objective is to collect information on basic indicators related to the national building stocks that in most cases are already reported in the national strategies.

*According to Article 2a of the Energy Performance of Buildings Directive (2010/31/EU – EPBD), a long-term renovation strategy (LTRS) has to be developed which "shall set out a roadmap with measures and domestically established measurable progress indicators, with a view to the long-term 2050 goal of reducing greenhouse gas emissions in the Union by 80-95 % compared to 1990, in order to ensure a highly energy efficient and* ***decarbonized national building stock and in order to facilitate the cost-effective transformation of existing buildings into nearly zero-energy buildings****. The roadmap shall include indicative milestones for 2030, 2040 and 2050, and specify how they contribute to achieving the Union's energy efficiency targets in accordance with Directive 2012/27/EU"*

# Annex 4 – Table 2 - Definitions

**Residential and non-residential buildings** include single family buildings and apartment blocks (multi apartment buildings) as a whole and not the individual number of apartments (building units). For example, if an apartment block has 10 apartments (building units) this should count for 1 building and not for 10 buildings. Non-residential buildings include offices, educational buildings, hospitals, hotels and restaurants, sports facilities, wholesale and retail trade services buildings and other types of energy-consuming buildings**.**

**Worst performing building** should be described in line with the national long-term renovation strategy. The Commission's Recommendation (EU) 2019/786 on building renovation provides examples to determine the worst-performing segments of the national building stock: (a) setting a specific threshold, such as an energy performance category (e.g. below 'D'); (b) using a primary energy consumption figure (expressed in kWh/m2 per year); or even (c) targeting buildings built before a specific date (e.g. before 1980).

# Annex 4 – Table 2

**Milestones and progress indicators of the long-term strategy (LTRS) for the renovation of the national stock of residential and non-residential buildings – building stock**

| | Number of buildings[1] | | | Total floor area (m2)[2] | | | Primary energy use of buildings (TJ)[3] | | | Final energy use of buildings (TJ)[3] | | | Direct GHG emissions in buildings ($tCO_{2e}$) | | | Total GHG emissions in buildings ($tCO_{2e}$) | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 |
| Specification | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ | $M_{iav}$ |
| Residential buildings | | | | | | | | | | | | | | | | | | |
| Of which worst performing buildings[5] | | 1 | | | 2 | | | 3 | | | 4 | | | 5 | | | 6 | |
| Non-Residential buildings | | | | | | | | | | | | | | | | | | |
| Of which worst performing buildings | | | | | | | | | | | | | | | | | | |
| Public buildings[8] | | | | | | | | | | | | | | | | | | |
| Of which worst performing buildings | | | | | | | | | | | | | | | | | | |

**FIELD 3: Primary energy use of buildings** reported in TJ should be as considered in the energy performance calculation of buildings defined by Directive 2010/31/EU: ‘primary energy’ means energy from renewable and non-renewable sources which has not undergone any conversion or transformation process.
**FIELD 4: The final energy consumption of households by end-use type.**

The purpose of this field is to report on and establish the total primary/final energy use of buildings in three historical years. The years are identified as 2020, X-3 and X-2, where X is the reporting year

# Annex 4 – Table 2

**Milestones and progress indicators of the long-term strategy (LTRS) for the renovation of the national stock of residential and non-residential buildings – building stock**

**FIELD 5: Direct GHG emissions in buildings** In the context of the NECP reporting GHG emissions (direct and total) relate to operational GHG (linked to energy use, direct and indirect), not to embodied carbon.

| | Number of buildings[1] | | | Total floor area (m2)[2] | | | Primary energy use of buildings (TJ)[3] | | | Final energy use of buildings (TJ)[3] | | | Direct GHG emissions in buildings ($tCO_{2e}$) | | | Total GHG emissions in buildings ($tCO_{2e}$) | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 |
| Specification | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ |
| Residential buildings | | | | | | | | | | | | | | | | | | |
| Of which worst performing buildings[5] | | 1 | | | 2 | | | 3 | | | 4 | | | 5 | | | 6 | |
| Non-Residential buildings | | | | | | | | | | | | | | | | | | |
| Of which worst performing buildings | | | | | | | | | | | | | | | | | | |
| Public buildings[8] | | | | | | | | | | | | | | | | | | |
| Of which worst performing buildings | | | | | | | | | | | | | | | | | | |

The purpose of this field is to report on and establish the Direct GHG emissions in buildings in three historical years. The years are identified as 2020, X-3 and X-2, where X is the reporting year.

Once the national estimate the final (FEC) and primary (PEC) energy consumption, the GHG emissions are easy to be calculated: the direct GHG emissions are the FEC for direct use of fossil fuels multiplied by the default emission factors related to net calorific values (in t CO2/TJ) for each fuel.

# Annex 4 – Table 2

**Milestones and progress indicators of the long-term strategy (LTRS) for the renovation of the national stock of residential and non-residential buildings – building stock**

| | Number of buildings[1] | | | Total floor area (m2)[2] | | | Primary energy use of buildings (TJ)[3] | | | Final energy use of buildings (TJ)[3] | | | Direct GHG emissions in buildings ($tCO_{2e}$) | | | Total GHG emissions in buildings ($tCO_{2e}$) | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 | 2020 | X-3 | X-2 |
| Specification | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ | $M_{av}$ |
| Residential buildings | | | | | | | | | | | | | | | | | | |
| Of which worst performing buildings[5] | | 1 | | | 2 | | | 3 | | | 4 | | | 5 | | | 6 | |
| Non-Residential buildings | | | | | | | | | | | | | | | | | | |
| Of which worst performing buildings | | | | | | | | | | | | | | | | | | |
| Public buildings[6] | | | | | | | | | | | | | | | | | | |
| Of which worst performing buildings | | | | | | | | | | | | | | | | | | |

**FIELD 6: Total GHG emissions** are the sum of direct emissions calculated in the previous field and indirect emissions. The indirect emissions, i.e. GHG emissions related to electricity or heat from district heating consumption, can be calculated by multiplying the average GHG emission intensity of electricity and heat generation in the given country or region with the corresponding electricity of heat from district heating consumption of the building stock. .

# Annex 4 – Table 2 follow up

**Other: Other milestones and progress indicators of the long-term strategy (LTRS) for the renovation of the national stock of residential and non-residential buildings – building stock**

The purpose of this field is for the CPs to report the name and unit of any other indicators as presented in the national long-term renovation strategy.

e.g. investments for the renovation of the existing stock, construction's share in GDP, health issues

# Annex 4 – Table 3 – Purpose of the table - LTRS

**Milestones and progress indicators of the long-term strategy for the renovation of the national stock of residential and nonresidential buildings – renovation rate**

This table refers to **‘energy renovations**’.

An energy renovation means the change of **one or more building elements** (building envelope and technical building systems), having the potential to significantly affect the calculated or metered amount of energy needed to meet the energy demand associated with a typical use of the building, which includes, inter alia, energy used for heating, cooling, ventilation, hot water and lighting.

**FIELD 1**: Each of the above categories is divided into 4 different indicators called renovation depths which should be reported for each of the years. These indicators are 'Light', 'Medium', Deep' and 'Total'.
**FIELD 2-3-4**: The purpose of this field is to report on and establish the total building floor area renovated in three historical years. The years are identified as X-3 and X-2, where X is the reporting year. The renovation rates and depths do not refer to individual buildings but to the whole renovated building stock.
**Renovation depths level are determined by the ratio between primary energy saved and total primary energy before renovation of the respective part of the stock**

| | | | | | | | | |
| Data format: text | text | text | number (integer) | text | text | text | number | (decimal) |

**FIELD 1**: The purpose of this field is to provide the name of a **milestone/progress indicator** that is supporting the implementation of the long-term strategy for the renovation of the national stock of residential and non-residential buildings.
**FIELD 3**: The Commission's Staff Working Document SWD (2022) 375 final "Analysis of the national long-term renovation strategies", and JRC's report "Assessment of first longterm renovation strategies under the Energy Performance of Building Directive (Art. 2a)" present different examples of the indicative milestones selected and the relevant targets.

# Annex 4 – Table 4

**Milestones and progress indicators of the long-term strategy for the renovation of the national stock of residential and non residential buildings – other indicators**

| Milestones and progress indicators of the long-term strategy for the renovation of the national stock of residential and non-residential buildings | Description | Target (1) | Target year | Progress towards target/ objective | Progress Indicator (if applicable) (2) | | | |
|---|---|---|---|---|---|---|---|---|
| | | | | | Name of indicator to monitor progress (3) | Unit | X-3 | X-2 |
| $M_{iap}$ | $M_{iap}$ | $M_{iap}$ | $M_{iap}$ | $M_{iap}$ | $M_{iap}$ | $M_{iap}$ | $M_{iap}$ | $M_{iap}$ |
| 1 | 2 | 3 | 4 | 5 | 6 | | | |
| | | | | | | | | |
| Data format: text | text | text | number (integer) | text | text | text | number (decimal) | |

**FIELD 4**: his field shall indicate the target year(s) which should be in line with the national LTRSs. They should report the targets/indicative milestones for 2030, 2040 and 2050 (or for any other target year) in different rows.
**FIELD 5**: [...]providing an update on the progress made towards a specific indicator in quantitative terms or by explaining which policies or actions have been put in place which will support the achievement of the target and how these policies and actions are performing against the set milestones.
**FIELD 6**: The purpose of this field is to report on the progress indicator towards the target outlined in FIELD 3. If the target/objective is quantifiable, they have to provide an indication of progress, with the latest available information. Indicators for reporting are to be determined on the basis of national objectives or targets

# Annex 4 – Table 5

**Milestones and progress indicators of the long-term strategy for the renovation of the national stock of residential and non residential buildings - the contributions to the Union's energy efficiency targets**

| | Specification | Description |
|---|---|---|
| Please describe how progress towards the milestones in the long-term renovation strategy contributed to achieving the Union's energy efficiency targets in accordance with Directive 2012/27/EU | M | 1 |

In accordance with Article 2a paragraph 2, the LTRS must specify how the milestones for 2030, 2040 and 2050 contribute to the indicative headline target defined in accordance with Article 3 of the Energy Efficiency Directive, since buildings are a key pillar of energy efficiency policy.

# Annex 4 – Table 6

**Update of other national objectives on energy efficiency as reported in the integrated national energy and climate plan**

| Name of national target/ objective | Description | Progress towards target/ objective (1) | Expected impacts of the set objective (2) |
|---|---|---|---|
| $M_{iap}$ | $M_{iap}$ | $M_{iap}$ | $M_{iap}$ |
| 1 | 2 | 3 | 4 |
| Data format: text (all) | | | |

**Purpose:**

- provide the name of a national target/objective as reported in each CPs NECP
- give context on the national target/ objective and describe the aim
- report on progress towards meeting the national target/objective
- report on expected impacts of the set objective

# Annex XVII

*Thematic guidance*

European Environment Agency

# ADDITIONAL REPORTING - Energy Efficiency

| Article 21 (c) – Additional reporting obligations in the area of energy efficiency | |
|---|---|
| By 15 March 2025 and every second year thereafter, CPs shall report on information pertaining to energy efficiency measures within buildings:<br><br>(1) the reasons behind stable or growing energy consumption;<br>(2) the condition and energy performance of public building;<br>(3) the extent of energy audits conducted in large enterprises;<br>(4) the new NZEBs and renovated buildings meeting NZEB standards. | |
| Reports due: | 15 March – Biannually – To start in 2025 |

# Annex 17 – Table 1

**Progress in each sector and reasons why energy consumption remained stable or was grooving in FEC sectors**

| Sector | Specification | Reasons for growth/stable final energy consumption in year X-3 [3] | If Other year X-3 | Reasons for growth/stable final energy consumption in year X-2 | If Other year X-2 |
|---|---|---|---|---|---|
| **Sectors** | | Select category(ies) from foonote (1): copy past the coresponding category label(s). If you include more than one category, please use " ; " as a separator between the different labels. | If you select "other" category, please specify which. | Select category(ies) from foonote (1): copy past the coresponding category label(s). If you include more than one category, please use " ; " as a separator between the different labels. | If you select "other" category, please specify which. |
| Industry | M | Choose (an) item(s) [1] | | Choose (an) item(s) [1] | |
| Transport | M | Choose (an) item(s) [1] **REASON** | | Choose (an) item(s) [1] | |
| Households | M | Choose (an) item(s) [1] | | Choose (an) item(s) [1] | |
| Services | M | Choose (an) item(s) [1] | | Choose (an) item(s) [1] | |
| Agriculture | M | Choose (an) item(s) [1] | 1. | Choose (an) item(s) [1] | 2. |

<u>The purpose of these fields is to report on and establish the reasons why energy consumption remained stable or was growing in final energy consumption sectors (Industry, Transport, Households, Services, Agriculture, Other sectors) in past calendar years. Additional sectors may be added and specified under 'Other'. The years concerned are X-3 and X-2, where X is the reporting year</u>.

- Economic growth;
- Decline of fuel prices;
- Increase of value added;
- Increase of employment;
- Increase of transport of goods;
- Increase of transport of passengers;
- Increase of population and/or households;
- Increase of disposable income of households;
- Worsening of winter climatic conditions;
- Worsening of summer climatic conditions;
- Exceptional event;

Change in the methodology of measurement or calculation of energy consumptions;

- Other

# Annex 17 – Table 2

**Total building floor area of the buildings with a total useful floor area over 250 m2 owned and occupied by the central government that, on 1 January in year X-2 and X-1, which did not meet the energy performance requirements referred to in Article 5(1) of EED**

| Reporting element | Specification | Unit | Indicators 1st of January of Year X-2 | Indicators 1st of January of Year X-1 | Additional information |
|---|---|---|---|---|---|
| Total building floor area of the buildings with a total useful floor area over 250 $m^2$ owned and occupied by the Member States' central government | V | $m^2$ | | number (decimal) | text |
| Total building floor area of the buildings which did not meet the energy performance requirements | M | $m^2$ | | 1. & 2. | 3. |

**Field 1-2**: The purpose of this field is to report on and establish the total building floor area of the buildings with a total useful floor area over 250 m2 owned and occupied by the central government AND total building floor area of the buildings which did not meet the energy performance requirements.

# Annex 17 – Table 3

**Number of energy audits carried out in in year X-3 and X-2. In addition, the total estimated number of large companies in their territory to which Article 8(4) of EED is applicable and the number of energy audits carried out in those enterprises in the year X-3 and X-2**

| Reporting element | Specification | Unit | Year X-3 [2] | X-2 |
|---|---|---|---|---|
| Total number of energy audits carried out | M | number | number (integer) | 1. |
| Number of large companies [1] to which Article 8(4) of Directive 2012/27/EU applies | M | number | | 2. |
| Number of energy audits carried out in large companies to which Article 8(4) of Directive 2012/27/EU is applicable | M | number | | 3. |

**FIELD 1-2**: The purpose of this field is to report on total number of energy audits carried out in historic calendar years, as well as of large companies. The years are identified as X-3 and X-2, where X is the reporting year.
**FIELD 3**: The purpose of this field is to report on the number of energy audits carried out in large companies to which Article 8(4) of the Energy Efficiency Directive is applicable in historic calendar years. The years are identified as X-3 and X2, where X is the reporting year. According to Article 8(4), they shall ensure that enterprises that are not SMEs are subject to an energy audit carried out in an independent and cost-effective manner by qualified and/or accredited experts or implemented and supervised by independent authorities under national legislation. Energy audits need to be performed at least every four years.

# Annex 17 – Table 4

**Applied national primary energy factor for electricity and a justification, if this is different from the default coefficient referred to in footnote (3) of Annex IV to EED**

| | | |
|---|---|---|
| National primary energy factor for electricity (number) | M | number (decimal) 1. |
| Justification, if factor is different from default coefficient referred to in footnote (3) of Annex IV to Directive 2012/27/EU | M | text 2. |

**FIELD 1**: The purpose of this field is to report on the national primary energy factor for electricity.
**FIELD 2**: The purpose of this field is to provide justification if the factor in field 1 differs to the Directive.

# Annex 17 – Table 5

**Number and floor area of new and renovated nearly zero-energy buildings (1) in year X-2 and X-1, as provided in Article 9 of EPBD, where necessary based on statistical sampling**

| Reporting element | Specification | Number | | Total floor area ($m^2$) | |
|---|---|---|---|---|---|
| | | X-2 | X-1 | X-2 | X-1 |
| Residential sector: Total | $M_{law}$ | | | | |
| Residential sector: New NZEBs | V | | | | |
| Residential sector: Renovation | V | | | | |
| Non-residential (private): Total | $M_{law}$ | | | | |
| Non-residential (private): New NZEBs | V | | | | |
| Non-residential (private): Renovation | V | | | | |
| Non-residential (public[2]): Total | $M_{law}$ | | | | |
| Non-residential (public): New NZEBs | V | | | | |
| Non-residential (public): Renovation | V | number (integer) | 1. | number (decimal) | 2. |
| | | | | | |
| Definition of nearly zero-energy buildings[3] | V | 3. | | | |

**FIELD 1**: The purpose of this field is to report on the number per building sector (residential, public and private non-residential sector) of new and renovated Nearly Zero-Energy Buildings (NZEBs). The reporting is required for two consecutive historic years starting from 1 January of X-2 and 1 January of X-1 on a number of reporting elements: Total, New NZEBs and Renovation individually for Residential, Non-residential (private) and Non-residential (public) sectors

**FIELD 3**: The definition of NZEB can be provided in this field in the form of a short description. It is recommended to cite where the definition comes from (i.e., legislation, strategy)

# Annex 17 – Table 6

**Internet link to the website where the list or the interface of energy services providers referred to in Article 18(1), point (c) of Directive 2012/27/EU <u>as adapted and adopted by Ministerial Council Decisions 2015/08/MC-EnC, 2021/14/MC-EnC and 2022/02/MC-EnC</u> can be accessible**

| | | |
|---|---|---|
| Internet link to the website of the list or the interface of energy services providers referred to in Article 18(1), point (c) of Directive 2012/27/EU [1] | M | 1. |
| Further details or comments on data | V | 2. |

The purpose of this field is to record the website where the list or the interface of energy services providers is captured.

# Reportnet 3

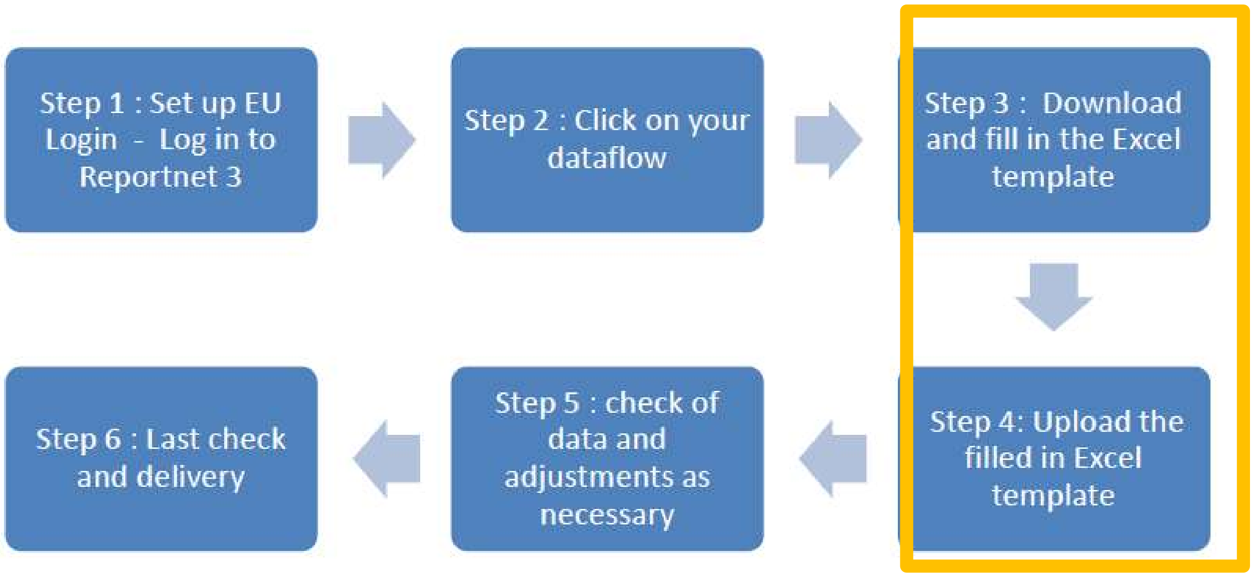
*Data input - overview*

European Environment Agency

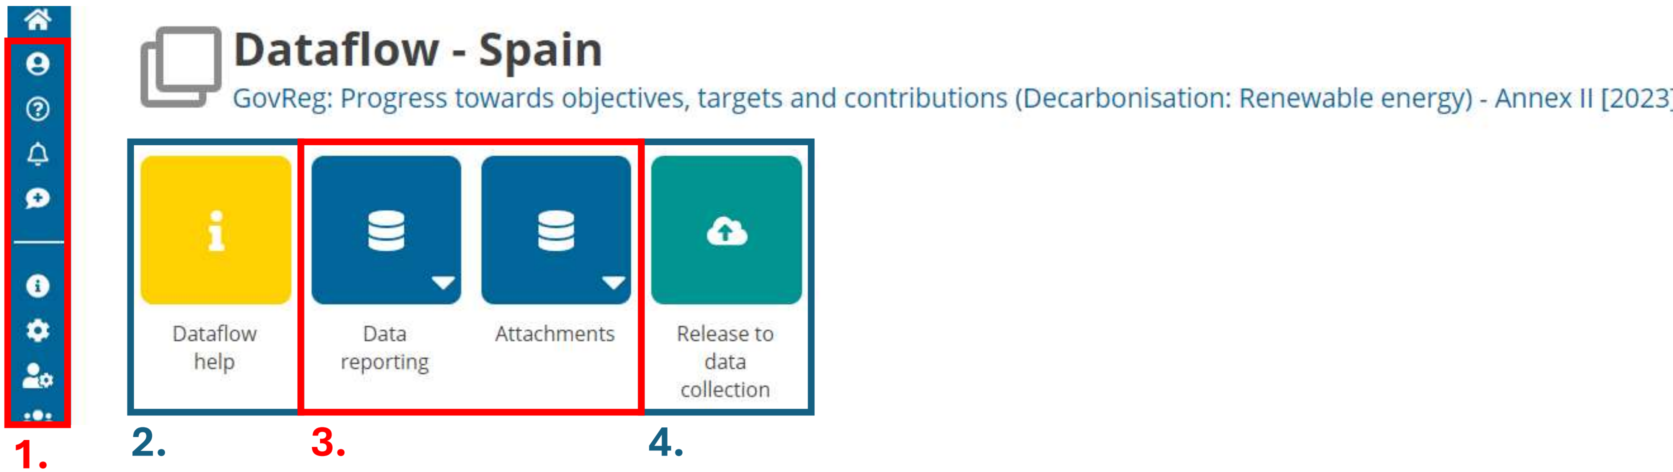
## How to deliver

All deliveries are provided via the Reportnet 3, which is maintained by the European Environment Agency (EEA).

**Summary of the delivery process**



# Overview of dataflow page



## 1. Navigation bar

Reporter management

<u>Notifications</u>!

## 2. Dataflow help

Documentation

Guidance

Legislation

## 3. Reporting schema

Where to report data

Focus on data reporting

Attachments to supplement reporting

## 4. Release data

The button to officially submit data

# Where can I access “prefilled” data?

**Prefilling / Post-filling is data that is not reported within <u>this</u> dataflow in Reportnet.**

### Reported data

To be filled in by CPs in Reportnet 3

### Prefilled data

Information provided by CPs prior to 15 March in other means (i.e. Eurostat)

### Post-filled

Information being provided by CPs simultaneously to 15 March in other dataflow(s) (i.e. Eurostat)

### Calculations

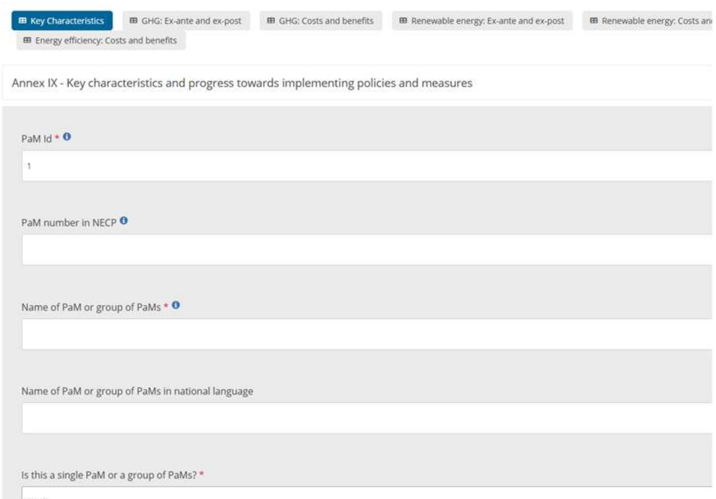
Calculations based on reported values

**Prefilled data can be downloaded** & reviewed via excel exports in Reportnet 3

**If issue of prefilled data:** contact data provider!!

# Reportnet: Webform

**Webform**



- **Simplified data entry in system** – Is an easier way to directly input data without complex IT interface (tabular data).
- **Data formats assured** – reporting via the webform only allows the correct values to be input (text, numbers, lists), ensuring a reduced quality check process required.
- **Direct QC review –** quality checks are directly visible in the webform in a more user-friendly mode, to help with updating such issues.

# Reportnet 3

# Reportnet: Excel import / Reportnet 3 tabular editing

**Excel import**

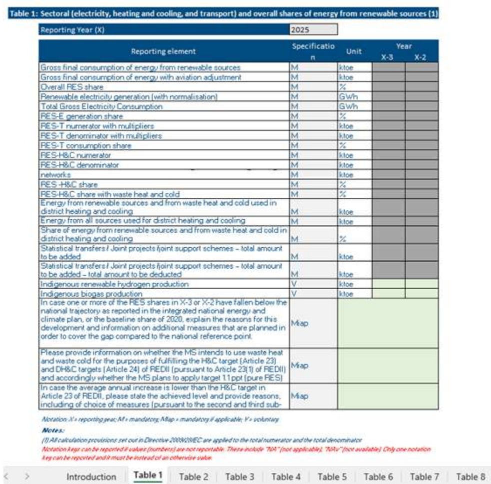

Table 1: Sectoral (electricity, heating and cooling, and transport) and overall shares of energy from renewable sources (1)

| Reporting Year (X) | 2025 | | | |
|---|---|---|---|---|
| Reporting element | Specification | Unit | Year X-3 | Year X-2 |
| Gross final consumption of energy from renewable sources | M | ktoe | | |
| Gross final consumption of energy with aviation adjustment | M | ktoe | | |
| Overall RES share | M | % | | |
| Renewable electricity generation (with normalisation) | M | GWh | | |
| Total Gross Electricity Consumption | M | GWh | | |
| RES-E generation share | M | % | | |
| RES-T numerator with multipliers | M | ktoe | | |
| RES-T denominator with multipliers | M | ktoe | | |
| RES-T consumption share | M | % | | |
| RES-H&C numerator | M | ktoe | | |
| RES-H&C denominator | M | ktoe | | |
| networks | M | ktoe | | |
| RES -H&C share | M | % | | |
| RES-H&C share with waste heat and cold | M | % | | |
| Energy from renewable sources and from waste heat and cold used in district heating and cooling | M | ktoe | | |
| Energy from all sources used for district heating and cooling | M | ktoe | | |
| Share of energy from renewable sources and from waste heat and cold in district heating and cooling | M | % | | |
| Statistical transfers / Joint projects /joint support schemes – total amount to be added | M | ktoe | | |
| Statistical transfers / Joint projects /joint support schemes – total amount to be added – total amount to be deducted | M | ktoe | | |
| Indigenous renewable hydrogen production | V | ktoe | | |
| Indigenous biogas production | V | ktoe | | |
| In case one or more of the RES shares in X-3 or X-2 have fallen below the national trajectory as reported in the integrated national energy and climate plan, or the baseline share of 2020, explain the reasons for this development and information on additional measures that are planned in order to cover the gap compared to the national reference point | Miap | | | |
| Please provide information on whether the MS intends to use waste heat and waste cold for the purposes of fulfilling the H&C target (Article 23) and DH&C targets (Article 24) of REDII (pursuant to Article 23(1) of REDII) and accordingly whether the MS plans to apply target 1.1 ppt (pure RES) | Miap | | | |
| In case the average annual increase is lower than the H&C target in Article 23 of REDII, please state the achieved level and provide reasons, including of choice of measures (pursuant to the second and third sub- | Miap | | | |

*Notation: X = reporting year; M = mandatory; Miap = mandatory if applicable; V = voluntary*

***Notes:***

*(1) All calculation provisions set out in Directive 2009/28/EC are applied to the total numerator and the total denominator*

*Notation keys can be reported if values (numbers) are not reportable. These include "NA" (not applicable), "NAv" (not available). Only one notation key can be reported and it must be instead of an otherwise value.*

Introduction | Table 1 | Table 2 | Table 3 | Table 4 | Table 5 | Table 6 | Table 7 | Table 8

- **Easy to use** - Excel follows structure of legislation.
- **Prefilling/Post-filling overview** - Highlights where data should be reported (green cells) and where no reporting in Reportnet 3 is required (grey cells – prefilled / post-filled).
- **Risk** – If import not used correctly can cause issues on the finally imported data to Reportnet 3.
  - *Do not edit data formats / structures – be careful when copying and pasting!*
- **Excel import does not equal reporting** – reporting is only considered complete once an official submission in the platform is made. Therefore, once data is imported, quality checks and final check of data is required!

# Using the excel import

**Excel import templates are split into two parts:**

## Introduction

*Provides information on the import template*

European Commission

Governance Regulation: Implementing Regulation 2022/2299
Annex II (Progress towards targets - Decarbonisation: renewable energy)

European Environment Agency

*Based on Commission Implementing Regulation (EU) 2022/2299 laying down rules for the application of Regulation (EU) 2018/1999 of the European Parliament and of the Council as regards the structure, format, technical details and process for the integrated national energy and climate progress reports*

**Instructions**

Color codes

| | |
|---|---|
| | When filling in the questionnaire, only green fields should be filled in. Not all fields are mandatory. |
| <please select> | Cells with this phrase contain an in-cell dropdown menu. When clicking the cell, a dropdown icon appears on its right. |
| | Grey shaded fields are cells in a table which should not be filled. |

*This import questionnaire does not include any "prefilling", "postfilling", or "aggregated" cells. This additional information will be provided in an export template automatically from Reportnet.*

**Submission:** After filling this template, you can upload it and submit your data in Reportnet https://reportnet.europa.eu/

**Guidance**

Additional guidance can be found on reportnet under the yellow "dataflow help" button, within the relevant dataflow.

**Contents of import template**

Table 1 Sectoral (electricity, heating and cooling, and transport) and overall shares of energy from renewable sources
Table 2 Total installed capacity from each renewable energy technology
Table 3 Total actual contribution (gross electricity generation) from each renewable energy technology in electricity
Table 4 Total actual contribution (gross final energy consumption) from each renewable energy technology in heating and cooling
Table 5 Total actual contribution (gross final energy consumption) from each renewable energy technology in the transport sector
Table 6 Biomass supply for energy use
Table 7 Other national trajectories and objectives

## Legal reporting tables

*Copies legislation format: green = CPs input!*

**Table 1: Sectoral (electricity, heating and cooling, and transport) and overall shares of energy from renewable sources (1)**

| Reporting Year (X) | 2025 | | | |

| **Reporting element** | **Specification** | **Unit** | **Year X-3** | **Year X-2** |
| Gross final consumption of energy from renewable sources | M | ktoe | | |
| Gross final consumption of energy with aviation adjustment | M | ktoe | | |
| Overall RES share | M | % | | |
| Renewable electricity generation (with normalisation) | M | GWh | | |
| Total Gross Electricity Consumption | M | GWh | | |
| RES-E generation share | M | % | | |
| RES-T numerator with multipliers | M | ktoe | | |
| RES-T denominator with multipliers | M | ktoe | | |
| RES-T consumption share | M | % | | |
| RES-H&C numerator | M | ktoe | | |
| RES-H&C denominator | M | ktoe | | |
| - Of which waste heat and cold utilised through district heating/cooling networks | M | ktoe | | |
| RES -H&C share | M | % | | |
| RES-H&C share with waste heat and cold | M | % | | |
| Energy from renewable sources and from waste heat and cold used in district heating and cooling | M | ktoe | | |
| Energy from all sources used for district heating and cooling | M | ktoe | | |

**! Do not edit formatting or structure of template !**

It is the CPs responsibly to ensure the data is imported correctly to Reportnet 3.

# Notation keys: In case there is no data available

**What is a Notation Key?**
A system to clarify lack of numerical data (where unavailable or not applicable).
Required for mandatory if applicable (Miap), if available (Miav), or voluntary (V) reporting.

| Notation key | Description |
|---|---|
| NA | **Not applicable** - For data and activities in a reporting country that are not applicable or relevant to the context of the reporting country. Anticipated to be used in the context of Miap and V reporting fields. This notation key can be used instead of a value or 0, to ensure complete reporting. |
| NAv | **Not available** – For data and activities in a reporting country that are applicable to the context of the reporting country, however the data is not available. Anticipated to be used in the context of Miap, Miav and V reporting fields. This value can be used instead of a value or 0, to ensure complete reporting. |
| C | **Confidential** – Specifically for Annex II, Table 5, reporting on greenhouse gas savings performance of biofuels. This notation key is for data and activities in a reporting country that are available but are confidential and therefore cannot be reported publicly at a disaggregated level. |

Import templates provide overview of when notation keys are accepted
**For any issues check the reporting guidelines!**

| Statistical transfers / Joint projects /joint support schemes – total amount to be added – total amount to be deducted | M | ktoe | 1000 | 1000 |
| Indigenous renewable hydrogen production | V | ktoe | 1000 | 1000 |
| Indigenous biogas production | V | ktoe | 1000 | 1000 |

**Purpose of exports**:

- To export reported values (green cells)
- To review prefilled (Eurostat data) (yellow cells)

Export templates can be used again as an import template.

**! Please note: Eurostat (prefilled) data cannot be imported into Reportnet only ‘green cell’ values !**

**Dataflows with prefilling:**

RES (Annexes II & XVI)

EE (Annex IV)

# Reportnet 3

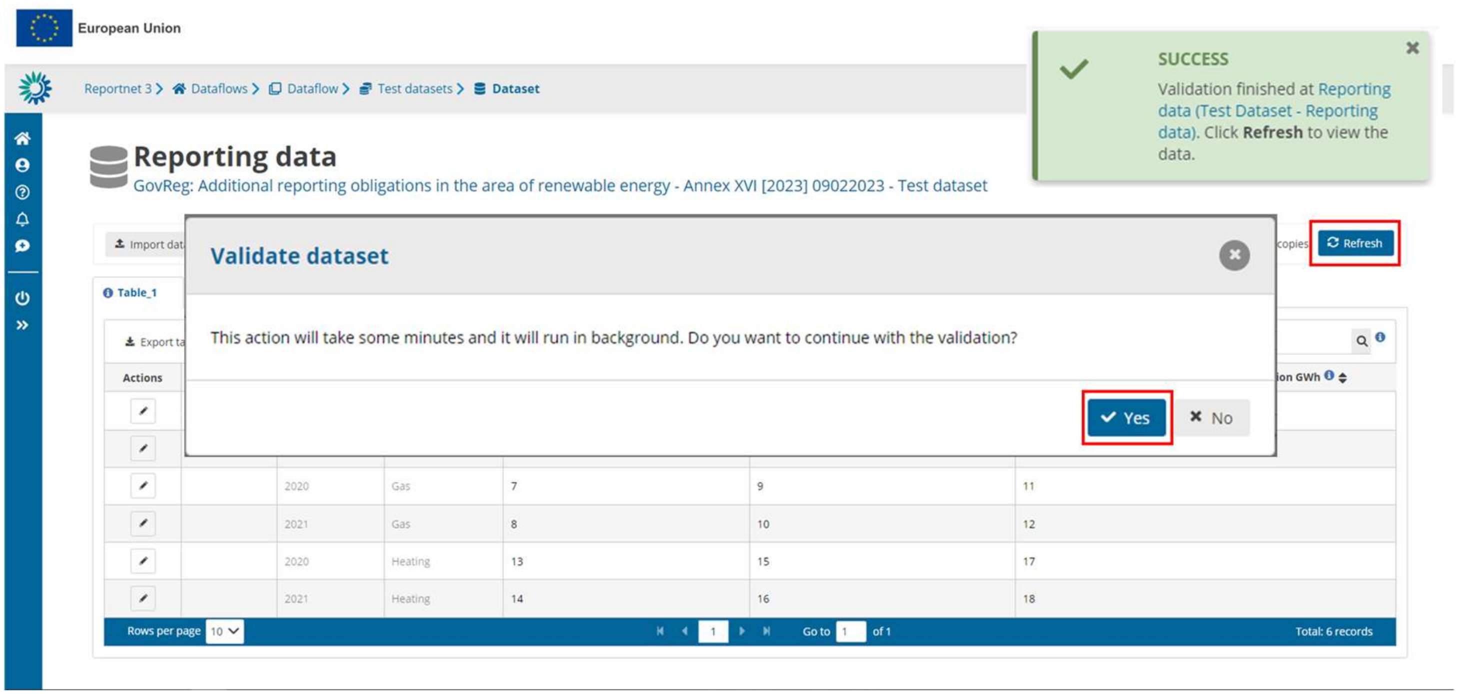
*Quality assurance - validations*

European Environment Agency

# Validation

The platform validates imported data thanks to automatic quality checks implemented in Reportnet 3 and according to predefined validation rules.

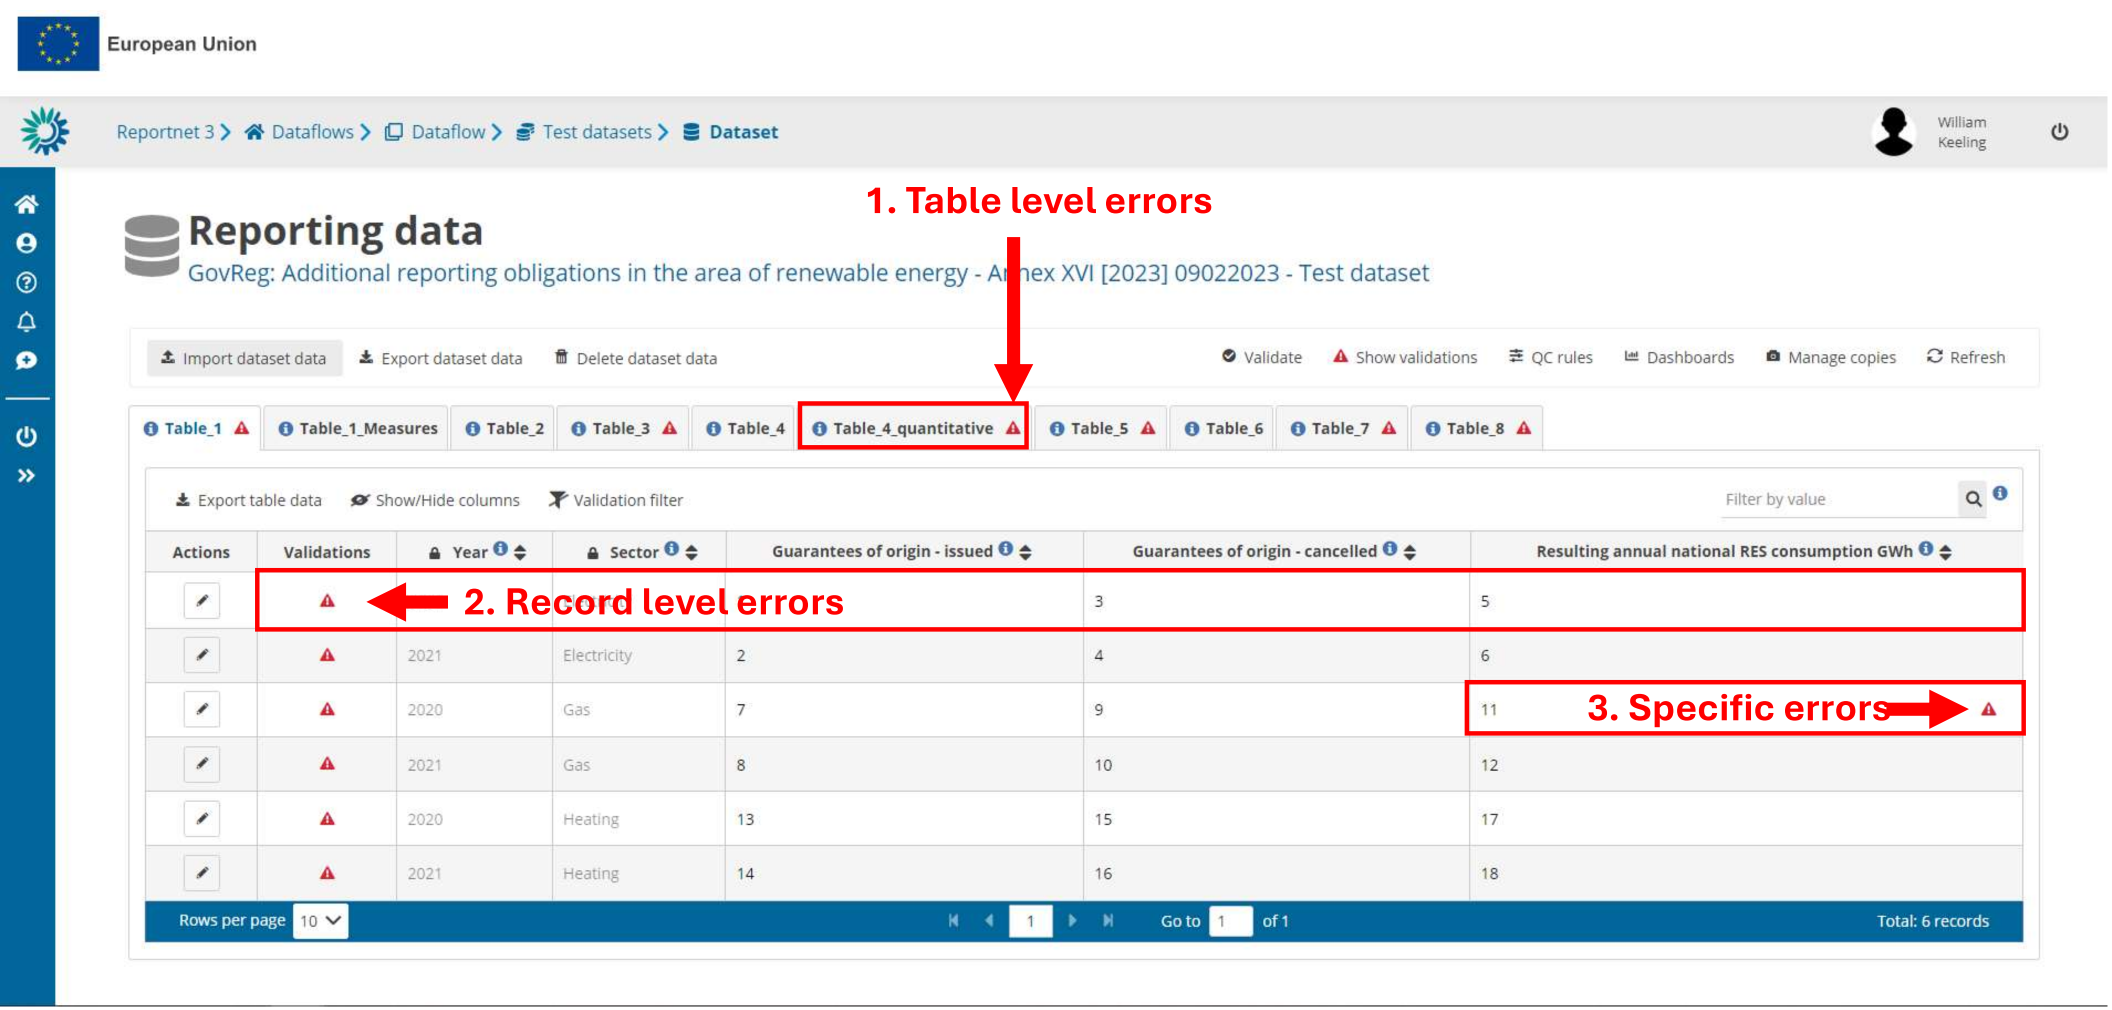
→ After having imported the filled in template → click on **Validate**, and **Refresh**



## Validations – types of errors

- **Warning** *(can release data)*
- **Error** *(can release data)*
- **Blocker** *(can't release data)*

# Validations – reviewing errors in the dataflow



# Validation

**Blocking errors** require a change of the reporting data. Release cannot be performed.

Two ways to correct or update data:

✓ Correct the Excel template and re-import the updated template

When re-importing a modified template, always click on "**Replace data**" before importing and validating an updated template

✓ Correct the fields directly in Reportnet by clicking on the field.

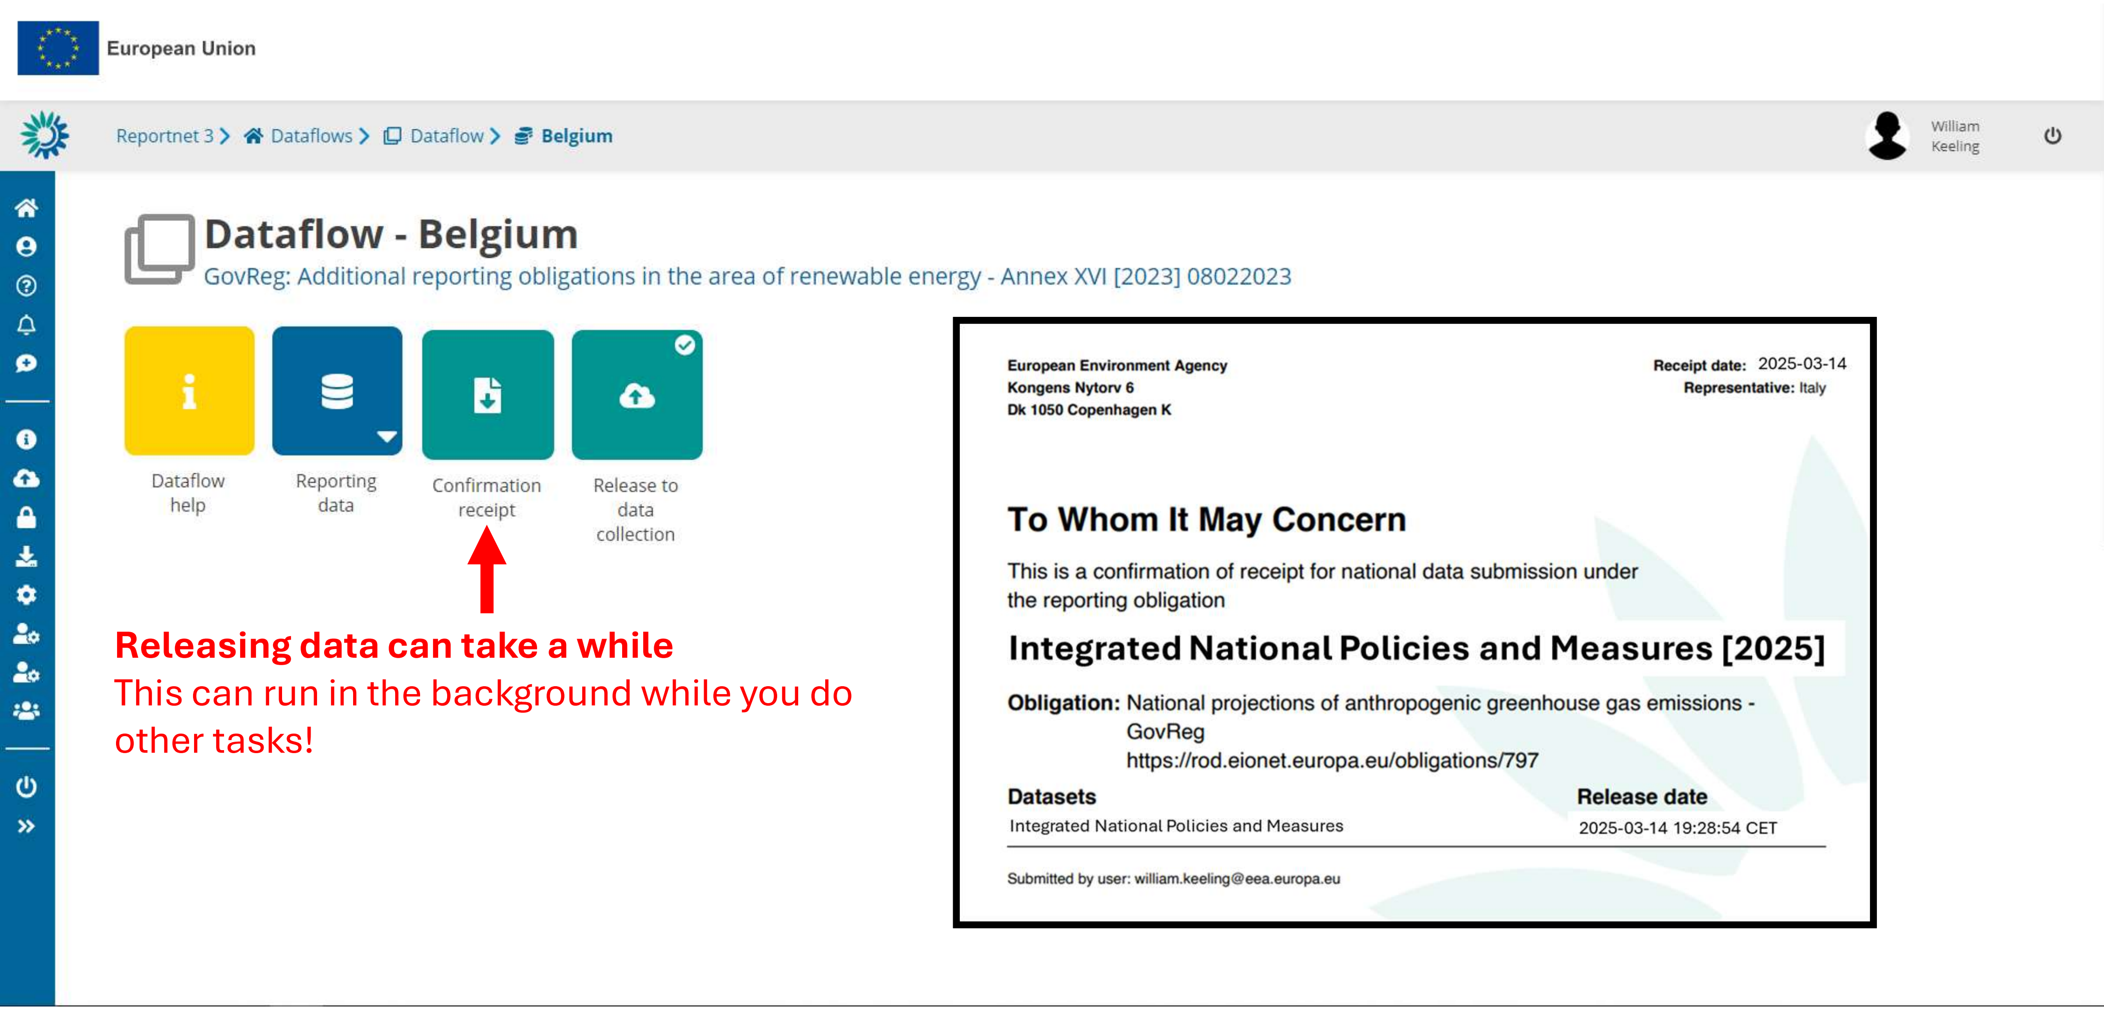
**In any case, the data must be validated → "Validate" and "Refresh".**

# Reportnet 3

***Release of data - submission***

European Environment Agency

# Data submission



**Releasing data can take a while**

This can run in the background while you do other tasks!

## Next steps

***Quality assurance and final datasets***

# Next steps – submission, quality checks, assessment

**Deadline for reporting:**

15 March 2025

**Quality assurance:**

15 March – 15 June

It will not be possible to extend after August (6 weeks needed before).

**Final dataset:**

End June

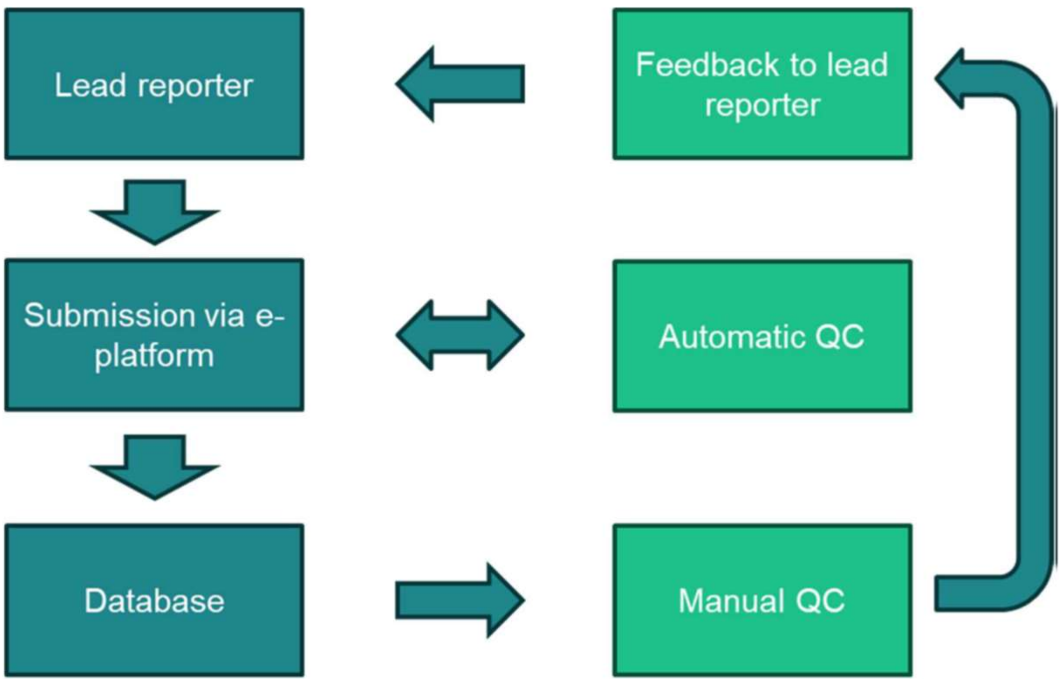
**Assessment & analysis:**

July – October

# Next steps – quality checks

**T** imeliness **T** ranspanrecy **A** ccuracy

**C** ompletness **C** onsistency **C** oherence & comparability



**ETC to prepare list of possibly quality issues (COMLOG)** to be shared with CPS after 15 March.

**CPs requested to resubmit data** officially in Reportnet 3.

ETC-EEA will only make updates to final dataset in communication with CPs.

# If questions – please reach out!

**For questions:**
magdalena.jozwicka@eea.europa.eu

Thank you

# Exercise

# Exercise

1. **Log into Reportnet, access the Annex XVII and open the reporting guidelines**

2. **Review the tables**

3. **Note any questions or concerns**

4. **If you want, try to add some data and try to validate them**

# Questions?

**Answer the following questions as a group:**

- **Are you able to identify the data needed?**
- **Do you think you will manage to submit it?**

**For questions:**
**magdalena.jozwicka@eea.europa.eu**
