GHG Policies and measures and projections in Estonia

07.10.2025

Cris-Tiina Pärn

Cris-tiina.parn@klab.ee

Republic of Estonia

SURFACE AREA: 45 339 km² (51% covered with forest)

POPULATION: 1 365 884 (0.3% of EU27 total)

CLEAN AIR: One of seven countries meeting WHO air quality standards in 2024

STRUCTURE OF ECONOMY:

Agriculture 2.5%

Industry 24%

Services 61.5%

HOW LEARNING CURVES FEEL...

STEINBERG

Today I will concentrate on...

1. National System, incl.

- Institutional arrangements
- Production plan
- Tools used
- Sustainability of the team

2. Lessons learned and challenges

National system

The national system for GHG policies and measures and projections reporting is the cornerstone of transparent and effective reporting—ensuring consistency, credibility, and actionable insights for climate governance

INSTITUTIONAL ARRANGEMENTS

Legal arrangements

§143 of the Atmospheric Air Protection Act

Activities to reduce climate change shall be arranged by the Ministry of Climate on the basis of the requirements for limitation of greenhouse gas emissions arising from the Framework Convention on Climate Change, the Kyoto Protocol, the Paris Agreement and the European Union legislation. In order to perform this duty, the Ministry of Climate ***may enter into an administrative contract pursuant to the procedure provided for in the Administrative Co-operation Act with a company in state ownership whose main activity is the environmental research.***

According to the Statutes of the **Estonian Environmental Research Centre** (as a state-owned company) guarantees the organisation and the timely submissions of the GHG reporting to the European Commission and to the UNFCCC.

The Statutes of **Estonian Environment Agency** stipulates the compilation the GHG reporting for LULUCF sector.

Institutional arrangements

TEAM= 3 coordinators + 7 experts
(incl 3 in LULUCF)

Ensuring TACCC principles

- Transparency
 - Accuracy
 - Consistency
 - Completeness
 - Comparability
- 
- **Public sector:** Ministries, Agencies, Boards, implementation entities
 - **Private sector:** Trade Unions, relevant companies (for example electricity producers)
 - Environmental protection organizations
 - Universities

PRODUCTION PLAN

Clear timeline is a must have!

**Team kick-off
meeting**

15. FEBRAURY

Ad-hoc thematic meetings as needed

**Process kick-
off** 19. MARCH

Ad-hoc thematic meetings as needed

**Collecting
parameters,
policies and
measures**
MARCH-MAY

**Preparing
projections**
MAY-SEPTEMBER

Ad-hoc thematic meetings as needed

Approval of parameters
28-30 MAY

**Introduction of
projection results**

SEPTEMBER- OCTOBER

2025 submission example

USEFUL TOOLS TO EASE THE REPORTING

Activity data collection: policies and measures

- Clear definitions what are “existing” and “planned” measure
- Excel spreadsheets to collect all relevant information on policies and measures that fulfill different purposes.
Collected on SharePoint

Microsoft Excel
Worksheet

Activity data collection: projections

- Excel spreadsheets to collect sectoral parameters

SUSTAINABILITY OF REPORTING

How we ensure sustainability of reporting in Estonia

- Maintaining and further developing National System, incl. clear production plan
- Complete and easy to use Archive
- Inclusive and transparent projection preparation process-explaining HOW the data is useful
- Expert to expert handover (testing with video tutorials)

Lessons learned and challenges

Challenges and lessons learned (1)

Challenge: GHG reporting used to be “niche topic”

Lesson learned: Governance regulation has helped to bring different stakeholders together and get the needed attention and resources to GHG reporting

Challenges and lessons learned (2)

Challenge: Institutional capacity-building is resource-intensive

Lesson learned: makes the reporting team find innovative ways to do it, including how to better communicate the needs for reporting to stakeholders

Challenges and lessons learned (3)

Challenge: Projections are as good as is the input activity data and parameters

Lesson learned: involve various stakeholders to get relevant parameters

Challenges and lessons learned (4)

Lesson learned: step by step enhancing reporting and further developing the national system

Challenges and lessons learned (5)

Lesson learned: quality projections support better climate policy making and domestic financial planning

Estonian Environmental Research Centre

Thank you!
