

Training on Integrated Progress Report **Renewable Energy – Annex II & XVI**

Ph.D. Stephane QUEFELEC
European Environment Agency

9 October 2025

European Environment Agency

Agenda

- **What to report: Overview of Reporting obligations on Renewable energy**

Thematic aspects: Annex II - EEA

Thematic aspects: Annex XVI- EEA

- **Insight from EU Member States – VITO Belgium**

How to report:

- **Reportnet 3 – EEA**
- **Exercise - EEA**

Logging in & set-up

Data input – overview

Data input – excel import

Data input – excel export

Quality assurance – validations

Release of data - submission

Objective and expected result

=> At the end of the session, you will know **WHAT** to report and **HOW** to use the templates and the Reportnet 3 platform to report the data on Annex II and XVI.

Welcome

Your speakers for this meeting:

- Stephane Quefelec– EEA – Climate Neutrality, Energy and Mobility (CMT 1)
- Tom Dove – VITO – ETC/CM

For questions:
Magdalena.Jozwicka@eea.europa.eu

National Energy and Climate Progress Reporting

Context

European Environment Agency

The Adapted Governance Regulation: planning & reporting

Energy Communities NECPR: EEA dataflow overview

Dataflow = a survey within the reporting platform containing information from particular reporting obligation(s) **which can be submitted independently** from other obligations.

GovReg: Progress towards objectives, targets and contributions (Energy...

According to Governance Regulation 2018/1999 Articles 4(a)(2) and 21(a), and Implementing Regulation 2022/2299 Annex IV

Obligation: Progress towards objectives, targets and contributions (Energy efficiency) - GovReg [↗](#)

Instrument: Regulation on the Governance of the Energy Union and Climate Action [↗](#)

Status: Open

Delivery date: 2023-03-15

GovReg: Progress towards objectives, targets and contributions...

According to Governance Regulation 2018/1999 Articles 4(a)(2) and 20(a), and Implementing Regulation 2022/2299 Annex II

Obligation: Progress towards objectives, targets and contributions (Decarbonisation: renewable energy) - GovReg [↗](#)

Instrument: Regulation on the Governance of the Energy Union and Climate Action [↗](#)

Status: Open

Delivery date: 2023-03-15

Dataflows in Reportnet 3: what are we focusing on today?

Many dataflows will be open soon for reporting in Reportnet 3:

NECPR – Progress to targets (GHG)	NECPR – Progress to targets (RES)	NECPR – Progress to targets (EE)	NECPR – Adaptation (Article 17)
NECPR – Additional reporting (RES)	NECPR – Additional reporting (EE)	Integrated National Policies and Measures (PaMs)	National systems for reporting on PaMs and projections
National GHG projections	Adaptation planning and strategies (Article 19)	European Climate Law Recommendations (*)	

* This dataflow is aligned with NECPR but is voluntarily provided under the European Climate Law 2021/1119

Overview of prefilled / post-filled data in this dataflow

Annex II

Annex XVI

Notation keys

What is a Notation Key?

A system to clarify lack of numerical data (where unavailable or not applicable).

Required for mandatory if applicable (Miap), if available (Miav), or voluntary (V) reporting.

Notation key	Description
NA	Not applicable - For data and activities in a reporting country that are not applicable or relevant to the context of the reporting country. Anticipated to be used in the context of Miap and V reporting fields. This notation key can be used instead of a value or 0, to ensure complete reporting.
NAv	Not available – For data and activities in a reporting country that are applicable to the context of the reporting country, however the data is not available. Anticipated to be used in the context of Miap, Miav and V reporting fields. This value can be used instead of a value or 0, to ensure complete reporting.
C	Confidential – Specifically for Annex II, Table 5, reporting on greenhouse gas savings performance of biofuels. This notation key is for data and activities in a reporting country that are available but are confidential and therefore cannot be reported publicly at a disaggregated level.

Import templates provide overview of when notation keys are accepted

For any issues check the reporting guidelines!

Annex II – Renewable energy

Thematic guidance

PROGRESS TO TARGET - Renewable Energy – legislation

Article 20 (a) – Progress towards objectives, targets, and contributions within renewable energy

By 15 March 2025 and every second year thereafter, CPs shall report to the Energy Community Secretariat their implementation of the following objectives within renewable energy:

- (1) overall/sectoral share of renewable energy in gross final energy consumption;
- (2) installed capacity from each renewable energy technology;
- (3) the contribution from each renewable energy technology in electricity, heating and cooling;
- (4) Biomass supply for energy use;
- (5) where applicable, other national trajectories and objectives, including those that are long-term and sectoral.

Reports due:

15 March – Biannually – To start in 2025

Annex 2 – Table 1

Sectoral (electricity, heating and cooling, and transport) and overall shares of energy from renewable sources

Reporting element	Specification	Unit	Year	
			X-3	X-2
Statistical transfers / Joint projects / joint support schemes – total amount to be added – total amount to be deducted	M	ktoe		
Indigenous renewable hydrogen production	V	ktoe	1.	1.
Indigenous biogas production	V	ktoe	2.	2.
In case one or more of the RES shares in X-3 or X-2 have fallen below the national trajectory as reported in the integrated national energy and climate plan, or the baseline share of 2020, explain the reasons for this development and information on additional measures that are planned in order to cover the gap compared to the national reference point.	Miap	3.		
Please provide information on whether the MS intends to use waste heat and waste cold for the purposes of fulfilling the H&C target (Article 23) and DH&C targets (Article 24) of REDII (pursuant to Article 23(1) of REDII) and accordingly whether the MS plans to apply target 1.1 ppt (pure RES) or 1.3 (RES + waste heat/cold).	Miap	4.		
In case the average annual increase is lower than the H&C target in Article 23 of REDII, please state the achieved level and provide reasons, including of choice of measures (pursuant to the second and third sub-paragraphs of Article 23(2) of REDII)	Miap	5.		

number (integer)

text

FIELD 1-2 :The purpose of this field is to provide the volume of indigenous renewable hydrogen and biogas production.

FIELD 3: in the case one or more of the RES shares in X-3 or X-2 have fallen below the national trajectory as reported in the integrated national energy and climate plan, or the baseline share of 2020, they have to explain the reasons for this development and provide information on additional measures that are planned in order to cover the gap compared to the national reference point.

Reporting element	Specification	Unit	X-3	
			X-3	X-2
Gross final consumption of energy from renewable sources	M	ktoe		
Gross final consumption of energy with aviation adjustment	M	ktoe		
<u>Overall</u> RES share	M	%		
Renewable electricity generation (with normalisation)	M	GWh		
Total Gross Electricity Consumption	M	GWh		
RES-E generation share	M	%		
RES-T numerator with multipliers	M	ktoe		
RES-T denominator with multipliers	M	ktoe		
RES-T consumption share	M	%		
RES-H&C numerator	M	ktoe		
RES-H&C denominator	M	ktoe		
Of which waste heat and cold utilised through district heating/cooling networks	M { ± }	ktoe		
RES -H&C share	M	%		
RES-H&C share with waste heat and cold	M	%		
Energy from renewable sources and from waste heat and cold used in district heating and cooling	M { ± }	ktoe		
Energy from all sources used for district heating and cooling	M { ± }	ktoe		
Share of energy from renewable sources and from waste heat and cold in district heating and cooling	M { ± }	%		
Statistical transfers/Joint projects/joint support schemes – total amount to be added	M { ± }	Ktoe		

Annex 2 – Table 1

Sectoral (electricity, heating and cooling, and transport) and overall shares of energy from renewable

Reporting element	Specification	Unit	Year	
			X-3	X-2
Statistical transfers / Joint projects / Joint support schemes – total amount to be added – total amount to be deducted	M	ktoe		
Indigenous renewable hydrogen production	V	ktoe	1.	1.
Indigenous biogas production	V	ktoe	2.	2.
In case one or more of the RES shares in X-3 or X-2 have fallen below the national trajectory as reported in the integrated national energy and climate plan, or the baseline share of 2020, explain the reasons for this development and information on additional measures that are planned in order to cover the gap compared to the national reference point.	Miap	3.		
Please provide information on whether the MS intends to use waste heat and waste cold for the purposes of fulfilling the H&C target (Article 23) and DH&C targets (Article 24) of REDII (pursuant to Article 23(1) of REDII) and accordingly whether the MS plans to apply target 1.1 ppt (pure RES) or 1.3 (RES + waste heat/cold).	Miap	4.		
In case the average annual increase is lower than the H&C target in Article 23 of REDII, please state the achieved level and provide reasons, including of choice of measures (pursuant to the second and third sub-paragraphs of Article 23(2) of REDII)	Miap	5.		

number (integer)

text

FIELD 4: to provide information about the use of waste heat and waste cold for the purposes of fulfilling the H&C target (Article 23) and DH&C targets (Article 24) of REDII and accordingly whether the MS plans to apply target 1.1 ppt (pure RES) or 1.3 (RES + waste heat/cold).

FIELD 5: in case the average annual increase is lower than the H&C target in Article 23 of REDII, to report the achieved level as a percentage and provide reasons, including of choice of measures (pursuant to the second and third sub-paragraphs of Article 23(2) of REDII).

Annex 2 – Table 2, 3 and 4

2 : Total installed capacity from each renewable energy technology

Relevant information, in case the evolution of installed capacity has an impact on the overall and sectoral trajectories for renewable energy from 2021 to 2030.

3 : Total actual contribution (gross electricity generation) from each renewable energy technology in electricity

Relevant information, in case the evolution of gross electricity generation has an impact on the overall and sectoral trajectories for renewable energy from 2021 to 2030.

4: Total actual contribution (gross final energy consumption) from each renewable energy technology in heating and cooling

Relevant information, in case the evolution of final energy consumption for heating and cooling has an impact on the overall and sectoral trajectories for renewable energy from 2021 to 2030.

(ALL big tables but most of this section will be pre-filled based on Eurostat SHARES data when available)

The purpose of this field is to provide relevant information, in case the evolution :

- of installed capacity,
- of gross electricity generation,
- of final energy consumption for heating and cooling,

has an impact on the overall and sectoral trajectories for renewable energy from 2021 to 2030.

Annex 2 – Table 5

Total actual contribution (gross final energy consumption) from each renewable energy technology in the transport sector

The purpose of this field is to report the GHG savings performance for the different categories of biofuels used in transport

Renewable energy technology	Specification	Unit	Volumes		Greenhouse saving performance ⁽¹⁾		
			X-3	X-2	Unit ⁽²⁾	X-3	X-2
COMPLIANT biofuels in transport							
all compliant biofuels in all transport modes	M	ktce			1a.	1b.	1b.
Annex IX (all transport modes)	M	ktce			1a.	1b.	1b.
Of which Art. 27.2(c) - in maritime sector	M ⁽⁵⁾	ktce			1a.	1b.	1b.
Of which Art. 27.2(c) - in aviation sector	M ⁽⁵⁾	ktce			1a.	1b.	1b.
By feedstock (all modes)							
Part A	M	ktce			1a.	1b.	1b.
Of which Part A in maritime sector (Art. 27.2c)	M ⁽⁵⁾	ktce			1a.	1b.	1b.
Of which Part A in aviation sector (Art. 27.2c)	M ⁽⁵⁾	ktce			1a.	1b.	1b.
Part A by feedstock (all modes)							
(a)	M	ktce			1a.	1b.	1b.
(b)	M	ktce			1a.	1b.	1b.
(c)	M	ktce			1a.	1b.	1b.

Most of this section will be pre-filled based on Eurostat SHARES data when available.

It is recommended that data provided here has the same unit for all rows. An example of a possible unit could be: Tonne CO₂, kt CO₂-eq.

FIELD 1a - 1b: Greenhouse saving performance has to be reported for the row “all compliant biofuels in all transport modes” (aggregated).

Annex 2 – Table 5

Total actual contribution (gross final energy consumption) from each renewable energy technology in the transport sector

Renewable energy technology	Specification	Unit	Volumes		Greenhouse saving performance ⁽¹⁾		
			X-3	X-2	Unit ⁽²⁾	X-3	X-2
Part B	M	ktoe			1a.	1b.	1b.

All electricity in rail transport	M	ktoe			1a.	1b.	1b.
RE in rail transport	M	ktoe			1a.	1b.	1b.
non-RE in rail transport	M	ktoe			1a.	1b.	1b.
All electricity in all other transport modes	M	ktoe			1a.	1b.	1b.
RE in all other transport modes	M	ktoe			1a.	1b.	1b.
non-RE in all other transport modes	M	ktoe			1a.	1b.	1b.
Relevant information, in case the evolution of final energy consumption for transport has an impact on the overall and sectoral trajectories for renewable energy from 2021 to 2030.	M		2.				

FIELD 2: The purpose of this field is to provide relevant information, in case the evolution of final energy consumption for transport has an impact on the overall and sectoral trajectories for renewable energy from 2021 to 2030.

Annex 2 – Table 6

Biomass supply for energy use	X-3					X-2				
	Indigenous production	Imports	Exports	Stock changes	Average net calorific value	Indigenous production	Imports	Exports	Stock changes	Average net calorific value
	in 1000 m3 (1)	in 1000 m3 (1)	in 1000 m3 (1)	in 1000 m3 (1)	(TJ/1000 m3) (2)	in 1000 m3 (1)	in 1000 m3 (1)	in 1000 m3 (1)	in 1000 m3 (1)	(TJ/1000 m3) (2)
Specification	M ⁽⁶⁾	M ⁽⁶⁾	V	V	V	M	M	V	V	V
For forest biomass: Description how these meet the land-use, land-use change and forestry (LULUCF) criteria of Article 29(7) of Directive (EU) 2018/2001 ⁽⁵⁾	1.									
Relevant information, in case the evolution on bioenergy supply has an impact on the overall and sectoral trajectories for renewable energy from 2021 to 2030.	2.									

Most of this section will be post-filled based on data from the Eurostat biomass questionnaire when available

FIELD 1: For forest biomass: Description how these meet the land-use, land-use change and forestry (LULUCF) criteria of Article 29(7) of Directive (EU) 2018/2001 (art 29 **Sustainability and greenhouse gas emissions saving criteria for biofuels, bioliquids and biomass fuels**);

FIELD 2: The purpose of this field is to provide relevant information, in case the evolution on bioenergy supply has an impact on the overall and sectoral trajectories for renewable energy from 2021 to 2030.

Annex 2 – Table 7

Other national trajectories and objectives

Trajectory or objective	Description	Target ⁽¹⁾	Target year	Progress towards target/ objective	Progress Indicator (if applicable) ⁽²⁾			
					Name of indicator to monitor progress ⁽³⁾	Unit	X-3	X-2
M _{1,yy}	M _{1,yy}	M _{1,yy}	M _{1,yy}	M _{1,yy}	M _{1,yy}	M _{1,yy}	M _{1,yy}	M _{1,yy}
Renewable energy use in district heating	2.	3.	4.	5.	6a.	6b.	6c.	6d.
Renewable energy use in buildings	2.	3.	4.	5.	6a.	6b.	6c.	6d.
Renewable energy produced by cities	2.	3.	4.	5.	6a.	6b.	6c.	6d.
Renewable energy communities	2.	3.	4.	5.	6a.	6b.	6c.	6d.
Renewables self-consumers	2.	3.	4.	5.	6a.	6b.	6c.	6d.
Energy recovered from the sludge acquired through the treatment of	2.	3.	4.	5.	6a.	6b.	6c.	6d.
Other national objective and trajectory, including sectoral and long term - 1	2.	3.	4.	5.	6a.	6b.	6c.	6d.
Other national objective	2.	3.	4.	5.	6a.	6b.	6c.	6d.

FIELD 1: The purpose of this field is to identify the other national trajectory or objectives set to increase the share of energy from renewable source in gross final consumption of energy in 2030, from 2021 onwards.

They have to integrate in their report other national trajectory and objectives, including those that are long-term and sectoral, for which a trajectory or an objective has been set at national level, different from the national contributions set in their NECP.

Annex 2 – Table 7 - Example

Other national trajectories and objectives

Good Example:

Share of renewables in heating and cooling networks in Germany.

The German Federal Government intends to achieve a further increase in the share of renewables in heating and cooling networks. According to the recast Renewable Energy Directive, the EU CPss are obliged to work towards an annual increase of 1% in the share of renewables in heating networks between 2020 and 2030 (calculated as a yearly average for the periods 2021- 2025 and 2025-2030). This ambitious goal is also defined in the NECP. The expected share of renewables in heating networks in 2021 is accordingly around 21%, with the figures for 2025 and 2030 being 25% and 30% respectively.

Annex 2 – Table 8

Assessment of the support for electricity from renewable sources pursuant to Article 6(4) of Directive (EU) 2018/2001

When applicable, provide information on the assessment of the support for electricity from renewable sources that Member States are to carry out pursuant to Article 6(4) of Directive (EU) 2018/2001 ⁽¹⁾	M _{isp}	1.
--	------------------	----

The purpose of this field is to report on the effectiveness of CPs’ support schemes for electricity from renewable sources and their major distributive effects on different consumer groups, and on investment.

The effect of the implemented supports for electricity from renewable sources needs to be presented in this field.

The CPs will provide information on concerned policies and measures developed.

The description have to also **include references to concerned PaMs** set providing support for electricity from renewable sources. PaMs have to be referred with references/links to direct users to documents and website.

Agenda

- **What to report: Overview of Reporting obligations on Renewable energy**

Thematic aspects: Annex II - EEA

Thematic aspects: Annex XVI- EEA

- **Insight from an EU Member State – VITO Belgium**

How to report:

- **Reportnet 3 – EEA**
- **Exercise - EEA**

Logging in & set-up
Data input – overview
Data input – excel import
Data input – excel export
Quality assurance – validations
Release of data - submission

Annex XVI – Additional reporting on RE

Thematic guidance

ADDITIONAL REPORTING - Renewable Energy - legislation

Article 20 (c) – Additional reporting obligations in the area of renewable energy

By 15 March 2025 and every second year thereafter, CPs shall report to the Energy Community Secretariat:

- (1) functioning of Guarantees of Origin (GO) system for electricity, gas and heating and cooling;
- (2) estimated excess / deficit in renewable energy projection compared to trajectory;
- (3) biomass usage functioning and effects on the country;
- (4) production and use of renewable energy in buildings.

Reports due: 15 March – Biannually – To start in 2025

The process for pre-filling, pre-loading and post-filling of data

Table	Type of filling	Source(s) of data
Annex 2, table 1 to 5	Pre-filling	Eurostat SHARES data
Annex 2, table 6	Post-filling	Eurostat biomass questionnaire
Annex 16, table 9	Pre-filling	Eurostat energy balances

Key def: A **Guarantee of Origin** is an electronic certificate that proves that a certain amount of electricity was produced from renewable energy sources (or, in some cases, high-efficiency cogeneration).

Annex 16 – Table 1

Functioning of the system of guarantees of origin for electricity, gas and heating & cooling from RES

Reporting element	Specification	Unit	Year	
			X-3	X-2
Electricity				
Guarantees of origin – issued ⁽¹⁾	M _{iap}	Number	1. number (integer)	
Guarantees of origin – canceled ⁽²⁾	M _{iap}	Number		
Guarantees of origin - resulting annual national renewable energy consumption ⁽³⁾	M _{iap}	GWh	number (decimal)	
Gas				
Guarantees of origin - issued	M _{iap}	Number		
Guarantees of origin - canceled	M _{iap}	Number		
Guarantees of origin - resulting annual national renewable energy consumption ⁽⁴⁾	M _{iap}	GWh		
Heating/cooling				
Guarantees of origin - issued	M _{iap}	Number		
Guarantees of origin - canceled	M _{iap}	Number		
Guarantees of origin - resulting annual national renewable energy consumption ⁽⁴⁾	M _{iap}	GWh		
Measures taken on Guarantees of Origin				
Measures taken to ensure reliability	M _{iap}	n/a	2.	
Measures taken to protect against fraud of the system	M _{iap}	n/a	3.	

FIELD 1: to indicate the details of the guarantees of origins for energy generated from renewable energy sources for electricity, gas and heating & cooling, including the following elements:

- Number of guarantees of origin issued for energy that is produced from renewable energy sources in the Member State during the reporting period.
- Number of guaranteed of origins cancelled for energy that is consumed in the Member State during the reporting period.
- The resulting annual national renewable energy consumption in GWh (formulas in the Guidance)

Annex 16 – Table 1

Functioning of the system of guarantees of origin for electricity, gas and heating & cooling from RES

Reporting element	Specification	Unit	Year	
			X-3	X-2
Electricity				
Guarantees of origin – issued ⁽¹⁾	M _{iap}	Number	1. number (integer)	
Guarantees of origin – canceled ⁽²⁾	M _{iap}	Number		
Guarantees of origin - resulting annual national renewable energy consumption ⁽³⁾	M _{iap}	GWh	number (decimal)	
Gas				
Guarantees of origin - issued	M _{iap}	Number		
Guarantees of origin - canceled	M _{iap}	Number		
Guarantees of origin - resulting annual national renewable energy consumption ⁽⁴⁾	M _{iap}	GWh		
Heating/cooling				
Guarantees of origin - issued	M _{iap}	Number		
Guarantees of origin - canceled	M _{iap}	Number		
Guarantees of origin - resulting annual national renewable energy consumption ⁽⁴⁾	M _{iap}	GWh		
Measures taken on Guarantees of Origin				
Measures taken to ensure reliability	M _{iap}	n/a	2. text	
Measures taken to protect against fraud of the system	M _{iap}	n/a	3.	

FIELD 2: The purpose is to present measures taken by the CPs to ensure the reliability of the system of guarantees of origin for electricity, gas and heating & cooling from renewable sources. Reliability mechanisms are required according to article 19 (6) of RED II.

- If the measures taken correspond to a legal act (law, decree, regulation, etc.), it is good practice to report its full name in the national language and in English, and provide a link to the Official Journal.

FIELD 3: The purpose of this field to present measures taken to protect against fraud of the system of guarantees of origin for ..[] Mechanisms to prevent fraud are required according to article 19 (6) of RED II.

Annex 16 – Table 2

Changes in commodity prices and land use associated with use of biomass and other forms of energy from renewable sources

Reporting element	Specification	Description	Attachments
Please report changes in commodity prices within the Member State associated with its increased use of biomass and other forms of energy from renewable sources ⁽¹⁾	M _{iap}	1a text	[Attachments can be provided in Reportnet]
Please report changes in land use within the Member State associated with its increased use of biomass and other forms of energy from renewable sources ⁽²⁾	M _{iap}	1b text	[Attachments can be provided in Reportnet]

2

The purpose of these fields is to report additional detailed information of the changes in commodity prices and land use due to feedstock used for bioenergy production (reported in Table 6, Annex II).

The changes must be associated with an increased use of biomass and other forms of energy from renewable sources on an annual basis, as indirect land-use change is evaluated on an annual basis (see (EU) 2019/807).

Annex 16 – Table 2

Changes in commodity prices and land use associated with use of biomass and other forms of energy from renewable sources

Changes in commodity prices include changes associated with:

- Shifts in prices related to food and feed crops used for bioenergy.
- Shifts in prices related to mounting solar panel systems on the ground;
- Shifts in prices related to increased demand for forest biomass;

The changes in land use only concern changes in land used for biomass consumed for energy or ground mounted solar panel system installed on agricultural land. They do not include changes in all agricultural land.

Annex 16 – Table 3

Estimated excess production of energy from renewable sources compared to the national trajectory towards the 2030 target

Reporting element	Specification	Unit	2022	2023	2024	2025	2026	2027	2028	2029	2030
Estimated excess production resulting from domestic renewable sources (A)	M _{cap}	ktoe	1.								
Estimated production resulting from joint projects between Member States or joint projects between Member States and third countries which counts toward the national contribution towards the 2030 target (B)	M _{cap}	ktoe	number (decimal)								
Estimated production resulting from joint support schemes which counts toward the national contribution towards the 2030 target (C)	M _{cap}	ktoe									
Estimated excess production overall (excluding future statistical transfers) (=A+B+C)	M _{cap}	ktoe									
Estimated deficit production resulting from domestic renewable sources (D)	M _{cap}	ktoe	negative number (decimal)								

When available, the goal is to report the estimated excess production of energy from renewable sources (in thousand tonnes of oil equivalent, ktoe) resulting from:

- Domestic renewable sources;
- Joint projects between CPs, or CPS and MS, or joint projects between CPs and non-EU countries (which counts toward the national contribution towards the 2030 target);
- Joint support schemes (which counts toward the national contribution towards the 2030 targets).

Annex 16 – Table 4

Technological development and deployment of biofuels made from feedstocks listed in Annex IX to Directive 2018/2001

Reporting element	Specification	Data
Please report technological development and deployment of biofuels in your country made from feedstocks listed in Annex IX to Directive 2018/2001 (1)	M	1. text

FIELD 1: The purpose of this field is to report on the technological development and deployment of biofuels, as foreseen in the indicative national trajectory for mainstreaming the renewable energy in transport sector (Article 25, RED II).

In particular, to report technological development within their territories of biofuels made from feedstocks by listing the different technology pathways and give a description of their status in a qualitative manner:

- Development phase by technology readiness level (TRL)
- How close they are to market uptake (in years or date, if available)
- Recent developments (description)
- Investments or research funds acquired.
- Energy conversion efficiency (primary energy in feedstock vs final energy in biofuel)
- Own energy consumption (in ktoe), source (market, own supply) and type (fossil, renewable)

Annex 16 – Table 5

Estimated impact of the production or use of biofuels, bioliquids and biomass fuels on biodiversity, water resources and availability, soils and air quality

Reporting element	Production of biofuels, bioliquids, biomass					Use of biofuels, bioliquids, biomass					Attachments

1. Biodiversity			2.					3.			[Attachments can be provided in Reportnet]
Water stock (ground water, surface water) & water availability											[Attachments can be provided in Reportnet]
Soils											[Attachments can be provided in Reportnet]
Air quality											[Attachments can be provided in Reportnet]

Mandatory, if available

The purpose is to provide the information when they have estimated impacts of the production/use of biofuels, bioliquids & biomass fuels on biodiversity / water resources and availability / soils / air quality

Annex 16 – Table 6 and 7

Observed cases of fraud in the chain of custody of biofuels, bioliquids and biomass fuels

Reporting element	Specification	Description	Attachment
Please report observed cases of fraud in the chain of custody of biofuels, bioliquids and biomass fuels	M _{iap}	1.	[Attachments can 2. be provided in Reportnet]

Share of biodegradable waste in waste-to-energy plants used for producing energy

Reporting Year (X)	2023	Mandatory, if applicable
--------------------	------	--------------------------

Reporting element	Year	
	X-3	X-2
Are waste-to-energy plants operated? ⁽¹⁾	1.	
If yes		
Share of biodegradable waste used (%)	2.	
Methodology for estimating the share	3.	
Steps taken to improve and verify the estimates	4.	

Annex 16 – Table 8

Electricity and heat generation from renewable energy in buildings, including, where available, disaggregated data on energy produced, consumed and injected into the grid

Reporting element	Specification	Unit	Year	X-3	X-2
Total final energy consumption from renewables in buildings for heating purposes	Mt ₁₀₀	ktoe			
Solar thermal systems	Mt ₁₀₀	ktoe			
Biomass ^[2]	Mt ₁₀₀	ktoe			
Heat pumps	Mt ₁₀₀	ktoe			
Geothermal systems	Mt ₁₀₀	ktoe			
Other decentralised renewable sources	Mt ₁₀₀	ktoe			
Total renewable heat consumed in buildings	Mt ₁₀₀	ktoe			
Solar thermal systems	Mt ₁₀₀	ktoe			
Biomass ^[2]	Mt ₁₀₀	ktoe			
Heat pumps	Mt ₁₀₀	ktoe			
Geothermal systems	Mt ₁₀₀	ktoe			
Other decentralised renewable sources	Mt ₁₀₀	ktoe			
Total renewable heat produced and fed into the grid (district heating)	Mt ₁₀₀	ktoe			
Solar thermal systems	Mt ₁₀₀	ktoe			
Biomass ^[2]	Mt ₁₀₀	ktoe			
Heat pumps	Mt ₁₀₀	ktoe			
Geothermal systems	Mt ₁₀₀	ktoe			
Other decentralised renewable sources	Mt ₁₀₀	ktoe			

The data on energy from renewable energy generated in buildings have to be **disaggregated for production / consumption / injection** into the grid according to the following fields:

- Final energy consumption from renewables in **buildings** for heating purposes. This means e.g. biomass directly combusted in households. It excludes heat produced from renewables in e.g. district heating installations that is afterwards sold to households or services (if we assume that buildings includes both households and services).
- Renewable heat consumed in buildings, it includes only heat produced from renewables in a district heating installation and afterwards sold to buildings
- Renewable heat produced and fed into the grid
- Renewable electricity production in buildings
- Renewable electricity consumption in buildings
- Renewable electricity fed into grid

Annex 16 – Table 8

Electricity and heat generation from renewable energy in buildings, including, where available, disaggregated data on energy produced, consumed and injected into the grid

Total renewable electricity production in buildings	M _{t,y}	ktoe		
Solar PV systems	M _{t,y}	ktoe		
Biomass ¹²¹	M _{t,y}	ktoe		
Geothermal systems	M _{t,y}	ktoe		
Other decentralised renewable sources	M _{t,y}	ktoe		
Total renewable electricity consumption in buildings	M _{t,y}	ktoe		
Solar PV systems	M _{t,y}	ktoe		
Biomass ¹²¹	M _{t,y}	ktoe		
Geothermal systems	M _{t,y}	ktoe		
Other decentralised renewable sources	M _{t,y}	ktoe		
Total renewable electricity fed into grid	M _{t,y}	ktoe		
Solar PV systems	M _{t,y}	ktoe		
Biomass ¹²¹	M _{t,y}	ktoe		
Geothermal systems	M _{t,y}	ktoe		
Other decentralised renewable sources	M _{t,y}	ktoe		

Progress reported has to include separate values for **different renewable sources** in each category (and for the total of each category):

- Solar thermal systems (only for heating reporting elements)
- Solar PV systems (only for electricity reporting elements)
- Biomass (as defined in RED II and following the Sustainability and greenhouse gas emissions saving criteria for biofuels, bioliquids and biomass fuels stipulated in Article 29 of Directive 2018/2001/EU)
- Heat pumps (only for heating reporting elements)
- Geothermal systems
- Other decentralised renewable source

Key takeaways

- Follow Colour-coding: Ensure correct interpretation of cells in import/export Excel tables.
- Reviewing EUROSTAT DATA you submitted
- Use notation keys
- Follow thematic guidelines for consistency
- Engage Ensure validation before submission with the QA/QC process for high-quality data
- Try to validate when you are sure you have done a good job.

First and second QAQC

Progress to target

30 Automatic QA/QC

- 6 “blocker” type QA/QC
- 24 “error” type QA/QC

Additional Reporting

81 Automatic QA/QC

- 14 “blocker” type QA/QC
- 49 "error" type QA/QC
- 18 "warning" type QA/QC

Manual checks for each CP

Completeness (20 checks): The purpose of this criterion is to verify that data has been reported for all non-voluntary fields;

Transparency (7 checks): The purpose of this criteria is to verify that data reported is understandable to most and univocal;

Accuracy (5 checks): Check if the values/information provided are accurate/plausible

----->
Data
resubmission

Manual checks for All CPs

Comparability

the purpose of this criterion is to verify that the submitted data is comparable across CPs.

Coherence

the purpose of this criterion is to verify that the submitted data is coherent in the context.

European Environment Agency

Reportnet 3 – How to report ?

Logging in & set-up

How to deliver

All deliveries are provided via the Reportnet 3, which is maintained by the European Environment Agency (EEA).

Summary of the delivery process

The next generation for e-Reporting environmental and climate data

Reportnet 3 is the new e-Reporting platform for reporting environmental and climate data to the European Environment Agency (EEA). The platform embraces the strategic goals of the European Commission's Green Deal and Digital Strategy and hosts reporting tasks on behalf of EEA and the Commission.

The transition of reporting obligations from Reportnet 2 to Reportnet 3 will take a number of years. Therefore, Reportnet 2 will remain operational until all data flows are migrated and will then become an archive.

Reportnet 2 can be accessed here:
<http://cdr.eionet.europa.eu/>

How to deliver

All deliveries are provided via the Reportnet 3, which is maintained by the European Environment Agency (EEA).

Summary of the delivery process

Reportnet: Excel import / Reportnet 3 tabular editing

Excel import

- **Easy to use** - Excel follows structure of legislation.

- **Prefilling/Post-filling overview** - Highlights where data should be reported (green cells) and where no reporting in Reportnet 3 is required (grey cells – prefilled / post-filled).

- **Risk** – If import not used correctly can cause issues on the finally imported data to Reportnet 3.

- *Do not edit data formats / structures – be careful when copying and pasting!*

- **Excel import does not equal reporting** – reporting is only considered complete once an official submission in the platform is made. Therefore, once data is imported, quality checks and final check of data is required!

Table 1: Sectoral (electricity, heating and cooling, and transport) and overall shares of energy from renewable sources (1)

Reporting Year (X)	2025				
Reporting element	Specification	Unit	Year	X-5	X-2
Gross final consumption of energy from renewable sources	M	ktoe			
Gross final consumption of energy with aviation adjustment	M	ktoe			
Overall RES share	M	%			
Renewable electricity generation (with normalisation)	M	GWh			
Total Gross Electricity Consumption	M	GWh			
RES-E generation share	M	%			
RES-E numerator with multipliers	M	ktoe			
RES-E denominator with multipliers	M	ktoe			
RES-E consumption share	M	%			
RES-HiC numerator	M	ktoe			
RES-HiC denominator	M	ktoe			
RES-HiC share	M	%			
RES-HiC share with waste heat and cold	M	%			
Energy from renewable sources and from waste heat and cold used in district heating and cooling	M	ktoe			
Energy from all sources used for district heating and cooling	M	ktoe			
Share of energy from renewable sources and from waste heat and cold in district heating and cooling	M	%			
Statistical transfer of joint projects (joint support schemes – total amount to be added)	M	ktoe			
Statistical transfer of joint projects (joint support schemes – total amount to be added – total amount to be deducted)	M	ktoe			
Indigenous renewable hydrogen production	V	ktoe			
Indigenous biogas production	V	ktoe			
In case one or more of the RES-E shares in 2021 or 2022 have fallen below the national reference as reported in the integrated national energy and climate plan, or the baseline share of 2020, explain the reasons for this development and information on additional measures that are planned in order to cover the gap compared to the national reference point.	MMap				
Please provide information on whether the MS intends to use waste heat and waste cold for the purposes of fulfilling the RES target (Article 23) and RES-E targets (Article 24) of REDII (pursuant to Article 23(b) of REDII) and accordingly whether the MS plans to apply target 11 pct (pure RES-E) in case the average annual increase is lower than the RES-E target in Article 23 of REDII, please state the achieved level and provide reasons, including a choice of measures (pursuant to the second and third sub-	MMap				

Annotation: X = reporting year; M = mandatory; Map = mandatory if applicable; V = voluntary

Notes: (1) All calculation procedures set out in Directive 2018/2001/EC are applied to the total numerator and the total denominator

Annotation: Xpct can be reported in values (percentages) are not reported. These include "NA" (not applicable), "N/A" (not available) and "N/A" (not available) (N/A) (not available) (N/A) (not available)

Introduction | **Table 1** | Table 2 | Table 3 | Table 4 | Table 5 | Table 6 | Table 7 | Table 8

Notation keys

What is a Notation Key?

A system to clarify lack of numerical data (where unavailable or not applicable).

Required for mandatory if applicable (Miap), if available (Miav), or voluntary (V) reporting.

Notation key	Description
NA	Not applicable - For data and activities in a reporting country that are not applicable or relevant to the context of the reporting country. Anticipated to be used in the context of Miap and V reporting fields. This notation key can be used instead of a value or 0, to ensure complete reporting.
NAv	Not available – For data and activities in a reporting country that are applicable to the context of the reporting country, however the data is not available. Anticipated to be used in the context of Miap, Miav and V reporting fields. This value can be used instead of a value or 0, to ensure complete reporting.
C	Confidential – Specifically for Annex II, Table 5, reporting on greenhouse gas savings performance of biofuels. This notation key is for data and activities in a reporting country that are available but are confidential and therefore cannot be reported publicly at a disaggregated level.

Import templates provide overview of when notation keys are accepted

For any issues check the reporting guidelines!

How to deliver

All deliveries are provided via the Reportnet 3, which is maintained by the European Environment Agency (EEA).
