

Real-life experience: **Renewable energy reporting**

Tom Dauwe

In-person training on reporting obligations for the
adapted Governance Regulation

9/10/2025

European Environment Agency
European Topic Centre
Climate change mitigation

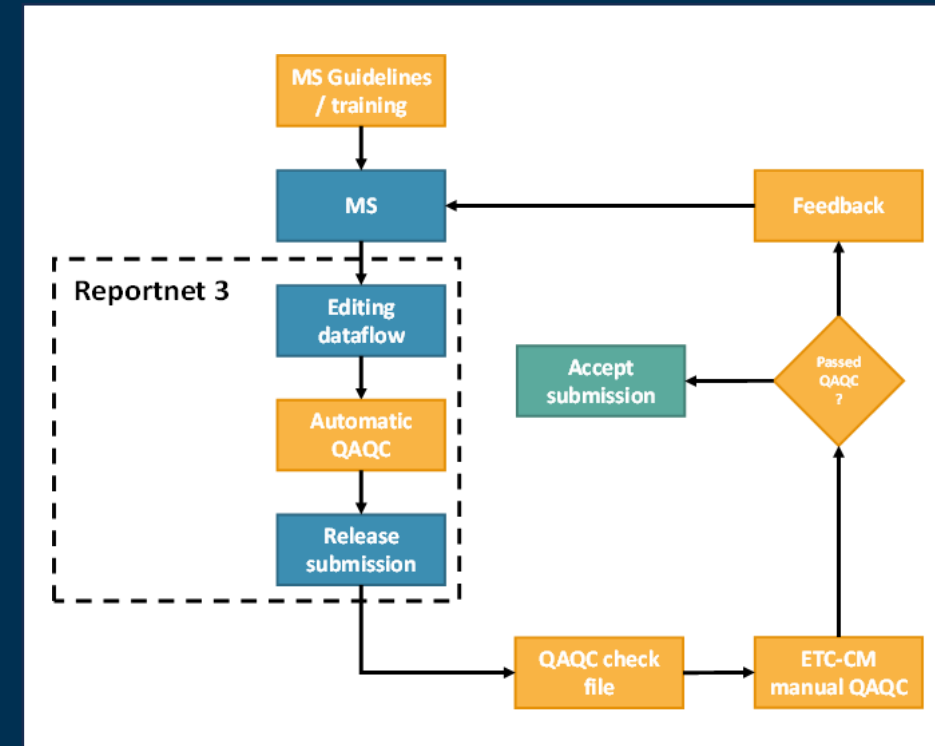

The European Topic Centre on Climate change mitigation (ETC CM)

- Support the European Environment Agency on the topics of greenhouse gas emissions, energy, and mobility.
 - Collecting, quality checking, compiling and reporting data and information;
 - Analysing and assessing this information;
 - Developing knowledge solutions to address environmental and sustainability challenges.
- <https://www.eionet.europa.eu/etcs/etc-cm>
- As part of the ETC activities, partners can be asked to contribute to specific additional requests from EEA

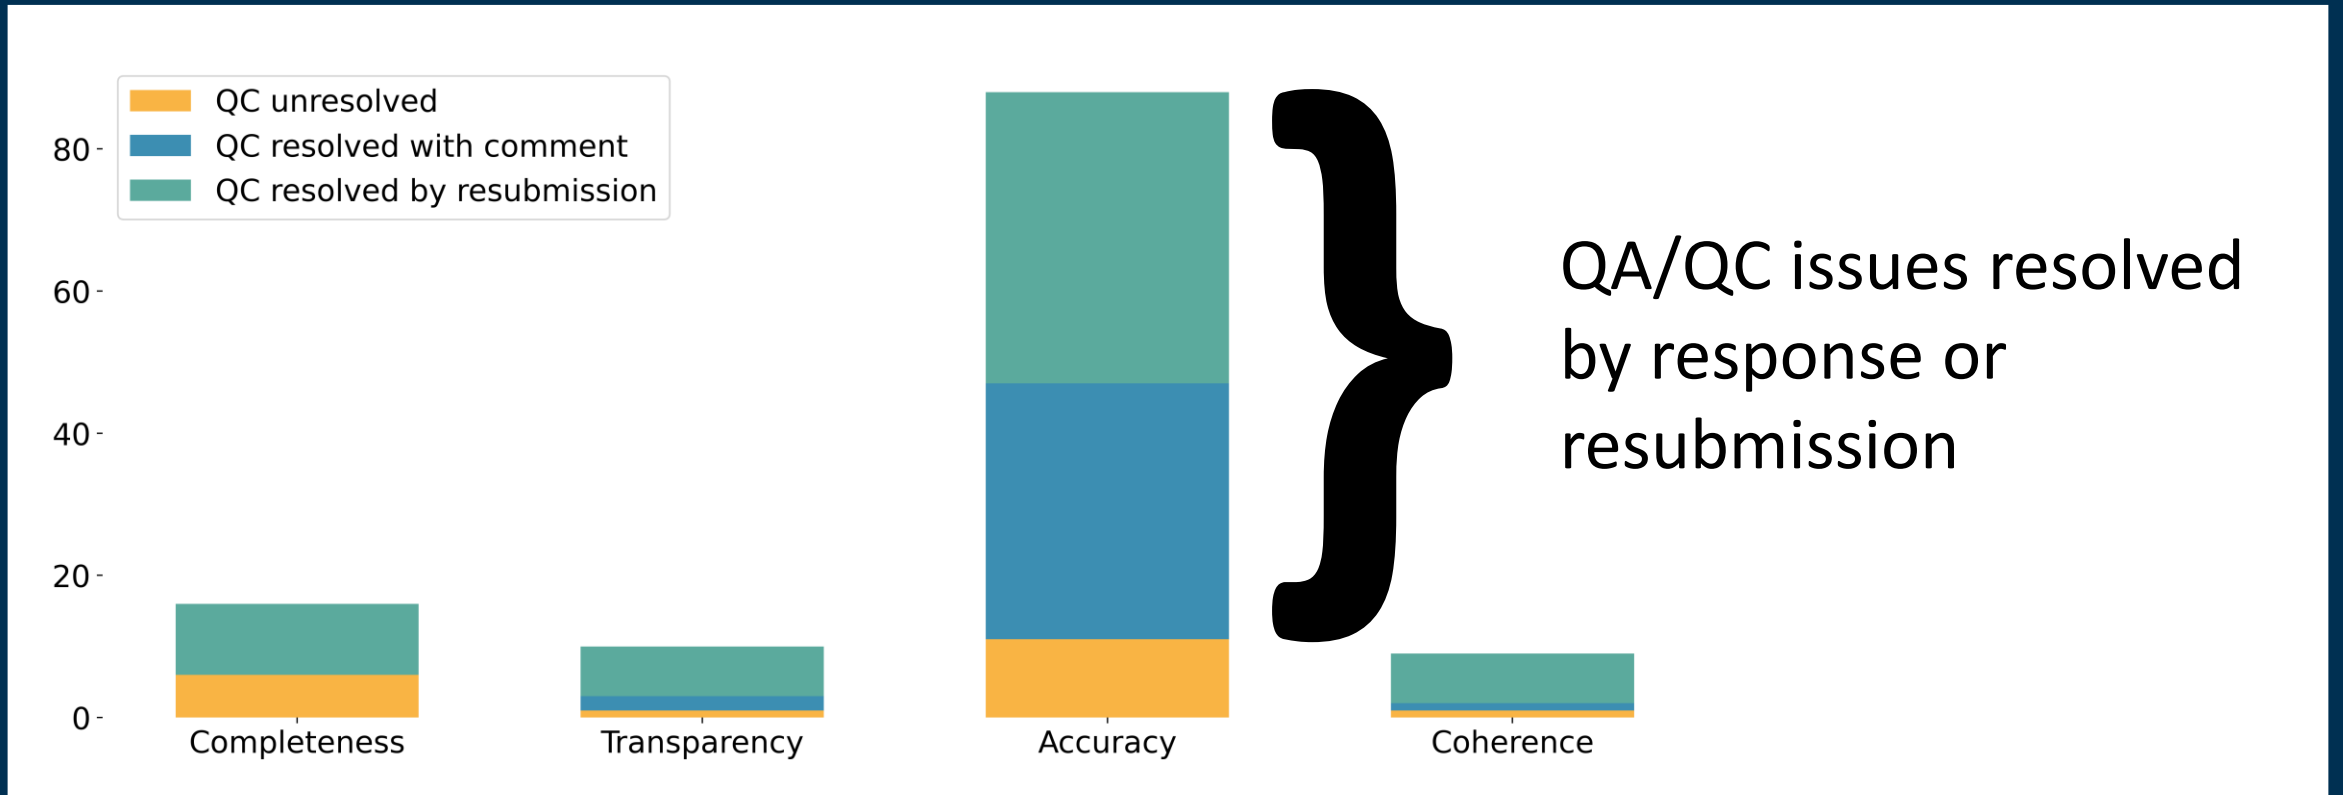

QA/QC procedure

- Similar to the QA/QC procedure for EU Member States
- Quality criteria:
 - Timeliness
 - Transparency
 - Accuracy
 - Completeness
 - Consistency/Coherence
 - *Comparability*
- Objective: improve quality of the reporting, together with the reporters.

QA/QC procedure - impact

QA/QC procedure - findings

Quality Control (QC) feedback report: Governance Regulation - National Energy and Climate Progress Reports (NECPR) Annex XVI: additional obligations in the area of renewable energy

European Environment Agency
European Topic Centre
Climate change mitigation

This is the feedback by the European Topic Centre on Climate change Mitigation and Energy (ETC-CM) after quality control of the information on additional obligations in the area of renewable energy under the Governance Regulation (2018/1999). We would like to invite you to read the questions and/or recommendations in this document and:

1) Provide written feedback for every quality check in the column "Response"

2) If updates are required, edit and re-release data in Reportnet 3

In case you have any questions regarding the feedback in this report, please feel free to contact the relevant data steward.

For technical assistance on altering and resubmitting the questionnaire, please check the reporting manual on Reportnet in the dataflow help section.

Meta-information	
Country	Croatia
Reporting year	2025
Reporting deadline	15/03/2025
Report type:	First submission
ReportId:	85405
Submission date	13-03-2025
Reviewer:	Miha Markelj
Email:	mmar@nilu.no
Finalisation date:	30/04/2025

Horizontal checks

Category	Question/topic	Result and comments from reviewer
Timeliness	What was the submission/resubmission	13-03-2025
	Comment timeliness	Before the deadline
Completeness	Mandatory fields	3 / 9
	Mandatory if applicable fields	56 / 68 (Notation keys used: NA: 12, NAv: 0)
	Mandatory if available fields	62 / 106 (Notation keys used: NA: 0, NAv: 44)
	Voluntary fields	0 / 0 (Notation keys used: NA: 0, NAv: 0)
	Comment Completeness	Answer in Table 7 is no, therefore all mandatory fields are filled. Mandatory if applicable fields are all filled.
Transparency	Is language English	Yes
	Attachments existence	No
	Are attachments in English?	NA
	Machine readable attachments	NA

Reporting - Timeliness

	Trajectory to targets - RES	Additional reporting - RES	Total
Contracting Parties

MD			6
ME			0
MK			5
RS			12
UA			10
GE			11
XK*			5

Transparency

- English
- Attachments / links to external documents!
- Is **qualitative information** provided transparently?

Example Cyprus

Example the Netherlands

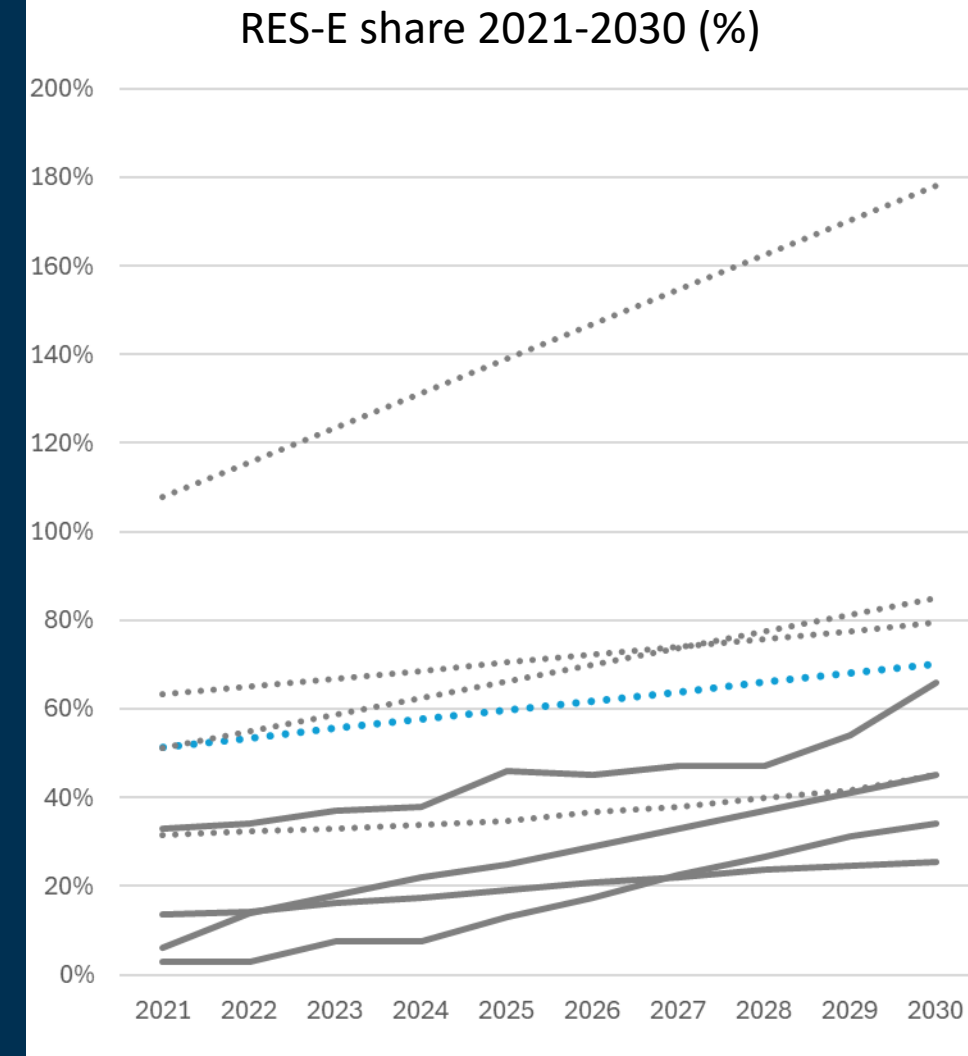

Annex XVI table 1
Additional information about the Electricity Guarantees of origin issued (for both 2022 and 2023): The numbers are including GOs for electricity that is not delivered to the grid. X-3; 3153 GOs X-2; 3080 GOs). These GOs are not reported to the AIB because these GOs cannot be traded. There is no amount of energy to add from the residual mix. In the Netherlands, all electricity (including renewables and non-renewables) must legally be labelled with GOs.
Additional information about the Gas Guarantees of origin cancelled: Because biomethane GOs can be cancelled by a trader (on behalf of an end-user) on their own account the consumption (domestic or foreign) cannot be determined. Because of a technical problem the data on Guarantees of Origin issued for gas in reporting year x-3 could not be generated on time for this progress report. However this information will be available at a later moment.
Additional information about the Heating/cooling Guarantees of origin RES: In the Netherlands, the GO- regulation (art. 25a) prescribes that a GO for heating or cooling can only be used as a proof for the supply of renewable, thermal energy when this energy is feeded into the same grid. GOs for heating and cooling are not reported to the AIB because registration in the AIB database is not yet possible. The amount of related energy in the mix was practically nil in the reporting years.

Accuracy

- During QA/QC, the ETC checks plausibility of reported data.
- Comparison against other data sources (e.g. SHARES or EUROSTAT).

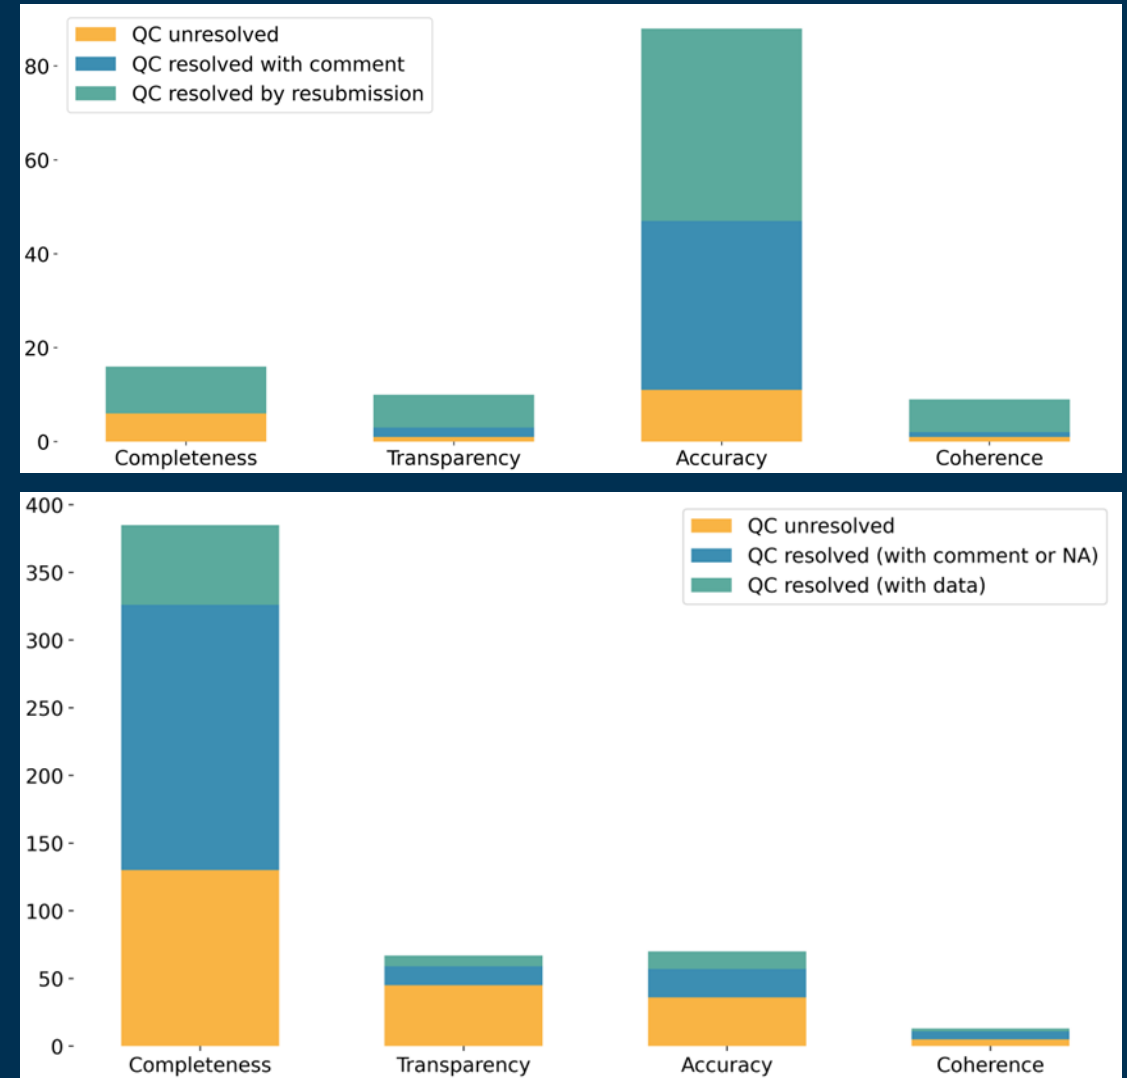

Example: trajectories to target the ETC checks if the RES shares have fallen below the national trajectory (from NECP).

- Be aware of reporting logic and unit!

Completeness

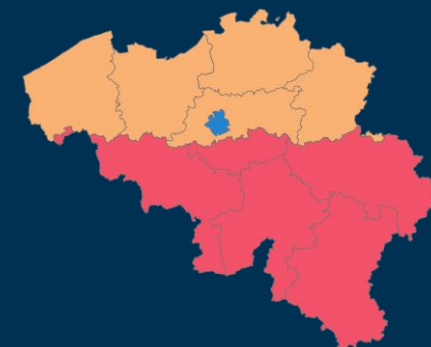

- Mandatory
- *Mandatory, if applicable*
- *Mandatory, if available*
- Voluntary

National system of Belgium

- *Belgium is a parliamentary constitutional monarchy with a complex federal system structured on regional and linguistic grounds* (Wikipedia)
- Competences such as greenhouse gas emissions and energy are the responsibility of the regions (Flanders, Wallonia, and Brussels Capital Region).
- For energy: Federal level responsible for security of supply; nuclear energy; offshore energy; large production, storage and transport infrastructure; and tariffs.
- This requires a coordination mechanism between the federal level and regional levels
- National Climate Commission (climate change): cooperation agreements on topics such as the National Climate Plan (2002), burden sharing (2015), ETS (2013), ...

National system of Belgium

- ENOVER (energy): established in the cooperation agreement of 1991.
- Constituents: 4 administrations (e.g. VEKA), 4 cabinets, Permanent Representative Belgium in EU, and FPS Foreign Affairs - DGE European Affairs and Coordination.
- Monthly coordination meetings:
 - Ensuring coherence of national and regional policies;
 - Aligning policies in response to EU legislation;
 - Collecting information for international reporting and the national energy balance;
 - Coordinating Belgian representation and national positions for international and European Institutions.
- Preparation in technical working groups focusing on energy (e.g. energy balance) and energy-related topics (e.g. NECP).

National system of Belgium

- In preparation of the Belgian National Energy and Climate Plan (NECP), a specific ENOVER-NCC steering committee 'NECP2030' was established to coordinate and steer the NECP.
- CONCERE/ENOVER-NCC steering committee NECP2030 also mandated to coordinate integrated NECP progress reports.
- Impact on reporting:
 - Quantitative data aggregated at the national level.
 - Reporting of textual information for federal and/or regional levels separately.

Annex II – Table 8: The **Federal government** did support the deployment of offshore wind production through different support mechanisms. [...]. The **Brussels Capital Region** supports the production of renewable electricity via green certificates. [...]. The **Flemish Region** calculates the appropriate support for each technology and gradually phases out the support as regular evaluations show that this is possible. [...]. The **Walloon Region** a study is ongoing.
